Health in Prisons

A WHO Guide to the Essentials in Prison Health

WHO Regional Office Europe **Based on the experience of many countries in the WHO European Region and the advice of experts, this guide outlines some of the steps prison systems should take to reduce the public health risks from compulsory detention in often unhealthy situations, to care for prisoners in need and to promote the health of prisoners and prison staff. This requires that everyone working in prisons understand how imprisonment affects health, what prisoners' health needs are, and how evidence-based health services can be provided for everyone needing treatment, care and prevention in prison. Other essential elements are being aware of and accepting internationally recommended standards for prison health; providing professional care with the same adherence to professional ethics as in other health services; and, while seeing individual needs as the central feature of the care provided, promoting a whole-prison approach to care and promoting the health and well-being of people in custody.**

Textbook of Pediatric Gastroenterology, Hepatology and Nutrition

A Comprehensive Guide to Practice

Springer **This textbook provides a comprehensive and state-of-the-art overview of the major issues specific to the field of pediatric gastroenterology, hepatology, and nutrition. The first part of the book, Gastroenterology and Nutrition, presents in a systematic way the overall scope of issues encountered by children (newborn to teenagers) suffering from disorders of the gastrointestinal tract, pancreas and/or presenting nutritional issues. These chapters are structured in logical sections to facilitate consultation and include major topics ranging from congenital disorders to**

gastrointestinal problems of the newborn, infectious diseases of the gastrointestinal tract, and approach to nutritional problems in the various pediatric ages. The second part of the book, Hepatology, is articulated in a series of chapters which present a comprehensive review of congenital and acquired disorders of the biliary tract and liver. This section also includes a critical analysis of available diagnostic and therapeutic procedures and future perspectives. Written by experts in the field, *Textbook of Pediatric Gastroenterology, Hepatology and Nutrition: A Comprehensive Guide to Practice* constitutes a much needed, innovative resource combining updated, reliable and comprehensive information with agile consultation for a streamlined approach to the care of children with such disorders.

The Anatomy of Fascism

Penguin UK Fascism was the major political invention of the twentieth century and the source of much of its pain. How can we try to comprehend its allure and its horror? Is it a philosophy, a movement, an aesthetic experience? What makes states and nations become fascist? Acclaimed historian Robert O. Paxton shows that in order to understand fascism we must look at it in action - at what it did, as much as what it said it was about. He explores its falsehoods and common threads; the social and political base that allowed it to prosper; its leaders and internal struggles; how it manifested itself differently in each country - France, Britain, the low countries, Eastern Europe, even Latin America as well as Italy and Germany; how fascists viewed the Holocaust; and, finally, whether fascism is still possible in today's world. Offering a bold new interpretation of the fascist phenomenon, this groundbreaking book will overturn our understanding of twentieth-century history.

The State of the World's Land and Water Resources for Food and Agriculture

Managing Systems at Risk

Routledge The State of the World's Land and Water Resources for Food and Agriculture is FAO's first flagship publication on the global status of land and water resources. It is an 'advocacy' report, to be published every three to five years, and targeted at senior level decision makers in agriculture as well as in other sectors. SOLAW is aimed at sensitizing its target audience on the status of land resources at global and regional levels and FAO's viewpoint on appropriate recommendations for policy formulation. SOLAW focuses on these key dimensions of analysis: (i) quantity, quality of

land and water resources, (ii) the rate of use and sustainable management of these resources in the context of relevant socio-economic driving factors and concerns, including food security and poverty, and climate change. This is the first time that a global, baseline status report on land and water resources has been made. It is based on several global spatial databases (e.g. land suitability for agriculture, land use and management, land and water degradation and depletion) for which FAO is the world-recognized data source. Topical and emerging issues on land and water are dealt with in an integrated rather than sectoral manner. The implications of the status and trends are used to advocate remedial interventions which are tailored to major farming systems within different geographic regions.

Pain Management and the Opioid Epidemic

Balancing Societal and Individual Benefits and Risks of Prescription Opioid Use

National Academies Press Drug overdose, driven largely by overdose related to the use of opioids, is now the leading cause of unintentional injury death in the United States. The ongoing opioid crisis lies at the intersection of two public health challenges: reducing the burden of suffering from pain and containing the rising toll of the harms that can arise from the use of opioid medications. Chronic pain and opioid use disorder both represent complex human conditions affecting millions of Americans and causing untold disability and loss of function. In the context of the growing opioid problem, the U.S. Food and Drug Administration (FDA) launched an Opioids Action Plan in early 2016. As part of this plan, the FDA asked the National Academies of Sciences, Engineering, and Medicine to convene a committee to update the state of the science on pain research, care, and education and to identify actions the FDA and others can take to respond to the opioid epidemic, with a particular focus on informing FDA's development of a formal method for incorporating individual and societal considerations into its risk-benefit framework for opioid approval and monitoring.

Bleeding During Pregnancy

A Comprehensive Guide

Springer Science & Business Media The phenomenon of bleeding has been shown to appear in up to 22% of all pregnancies and is associated with significant maternal and fetal morbidities, and even mortality. Although vaginal bleeding occurs mainly during the first trimester, it can appear at any stage of pregnancy and in the postpartum period. This sometimes life-threatening event requires an extensive work-up in order to recognize its cause and establish a rapid and effective therapeutic approach. This book is a comprehensive appraisal of this critical condition. It draws on evidence-based data and brings together, in a single volume, updated information on all aspects of pregnancy-related bleeding. A global group of interdisciplinary experts contributed chapters on: bleeding during early pregnancy (early pregnancy loss, ectopic pregnancy, gestational trophoblastic disease, and cancer of the reproductive tract during pregnancy); bleeding in late pregnancy (preterm delivery, placental abruption, placenta previa, vasa previa and uterine rupture); and postpartum hemorrhage.

Confidently manage any clinical endocrinopathy you may encounter thanks to new information on recent FDA-approved drugs for pituitary disorders, a new focus on pediatrics, and new content on diabetes, obesity, and appetite control. Benefit from the expertise of dynamic new contributors who offer fresh perspectives throughout.

When Professionals Weep

Emotional and Countertransference Responses in Palliative and End-of-Life Care

Routledge When Professionals Weep speaks to the humbling and often transformational moments that clinicians experience in their careers as caregivers and healers—moments when it is often hard to separate the influence of our own emotional responses and worldviews from the patient's or family's. *When Professionals Weep* addresses these poignant moments—when the professional's personal experiences with trauma, illness, death, and loss can subtly, often stealthily, surface and affect the helping process. This edition, like the first, both validates clinicians' experiences and also helps them process and productively address compassion fatigue, burnout, and secondary traumatic stress. New material in the second edition includes increased emphasis on the burgeoning fields of hospice and palliative care, organizational countertransference, mindfulness, and compassionate practice. It includes thought-provoking cases, self-assessments, and exercises that can be used on an individual, dyadic, or group basis. This volume is an invaluable handbook for practitioners in the fields of medicine, mental health, social work, nursing, chaplaincy, the allied health sciences, psychology, and psychiatry.

Education for Life and Work

Developing Transferable Knowledge and Skills in the 21st Century

National Academies Press Americans have long recognized that investments in public education contribute to the common good, enhancing national prosperity and supporting stable families, neighborhoods, and communities. Education is even more critical today, in the face of economic, environmental, and social challenges. Today's children can meet future challenges if their schooling and informal learning activities prepare them for adult roles as citizens, employees, managers, parents, volunteers, and entrepreneurs. To achieve their full potential as adults, young people need to develop a range of skills and knowledge that facilitate mastery and application of English, mathematics, and other school subjects. At the same time, business and political leaders are increasingly asking schools to develop skills such as problem solving, critical thinking, communication, collaboration, and self-management - often referred to as "21st century skills." *Education for Life and Work: Developing Transferable Knowledge and Skills in the 21st Century* describes this important set of key skills that increase deeper learning, college and career readiness, student-centered learning, and higher order thinking. These labels include both cognitive and non-cognitive skills- such as critical thinking, problem solving, collaboration, effective communication, motivation, persistence, and learning to learn. 21st century skills also include creativity, innovation, and ethics that are important to later success and may be developed in formal or informal learning environments. This report also describes how these skills relate to each other and to more traditional academic skills and content in the key disciplines of reading, mathematics, and science. *Education for Life and Work: Developing Transferable Knowledge and Skills in the 21st Century* summarizes the findings of the research that investigates the importance of such skills to success in education, work, and other areas of adult responsibility and that demonstrates the importance of developing these skills in K-16 education. In this report, features related to learning these skills are identified, which include teacher professional development, curriculum,

assessment, after-school and out-of-school programs, and informal learning centers such as exhibits and museums.

Artificial Hells

Participatory Art and the Politics of Spectatorship

Verso Books Since the 1990s, critics and curators have broadly accepted the notion that participatory art is the ultimate political art: that by encouraging an audience to take part an artist can promote new emancipatory social relations. Around the world, the champions of this form of expression are numerous, ranging from art historians such as Grant Kester, curators such as Nicolas Bourriaud and Nato Thompson, to performance theorists such as Shannon Jackson. *Artificial Hells* is the first historical and theoretical overview of socially engaged participatory art, known in the US as "social practice." Claire Bishop follows the trajectory of twentieth-century art and examines key moments in the development of a participatory aesthetic. This itinerary takes in Futurism and Dada; the Situationist International; Happenings in Eastern Europe, Argentina and Paris; the 1970s Community Arts Movement; and the Artists Placement Group. It concludes with a discussion of long-term educational projects by contemporary artists such as Thomas Hirschhorn, Tania Bruguera, Paweł Althamer and Paul Chan. Since her controversial essay in *Artforum* in 2006, Claire Bishop has been one of the few to challenge the political and aesthetic ambitions of participatory art. In *Artificial Hells*, she not only scrutinizes the emancipatory claims made for these projects, but also provides an alternative to the ethical (rather than artistic) criteria invited by such artworks. *Artificial Hells* calls for a less prescriptive approach to art and politics, and for more compelling, troubling and bolder forms of participatory art and criticism.

Ethical Issues and Guidelines in Psychology

Routledge How do we know right from wrong, good from bad, help from hindrance, and how can we judge the behavior of others? Ethics are the rules and guidelines that we use to make such judgements. Often there are no clear answers, which make this subject both interesting and potentially frustrating. In this book the authors offer readers the opportunity to develop and express their own opinions in relation to ethics in psychology. There are a number of famous many psychological studies that appear to have been harmful or cruel to the people or animals who took part in them. For example, memory researchers carried out studies on a man who had no memory for over forty years, but because he had no memory, he was never able to agree to the studies. Is this a reasonable thing to do to someone? Comparative psychologist Harry Harlow found that he could create severe and lasting distress in monkeys by keeping them in social isolation. Is this a reasonable thing to do even if we find out useful things about human distress? If you were able to use psychological techniques to break someone down so that they revealed information that was useful to your government would you do it? If so, why and if not, why not? These ethical issues are not easy to resolve and the debates continue as we encounter new dilemmas. The book uses many examples of psychological research to look at key ethical issues ethical guidelines of psychologists socially sensitive research ethics in applied psychology the use of animals in research This book will be essential reading for and undergraduate and pre-undergraduate students studying psychology and students of other subjects concerned with ethics.

Preventing Drowning

An Implementation Guide

"Far too many people around the world know the pain of losing a loved one to drowning. Each year almost 360,000 people die from drowning--over 90% of them in low- and middle income countries. More than half of these deaths are among those younger than 25, with children aged under 5 facing the greatest risk. Drowning is the third leading cause of death worldwide for those aged from 5 to 14. Despite these tragic facts, drowning prevention gets relatively little

attention and few resources. There is far more we can do to prevent drowning. Global commitments made as part of the Sustainable Development Goals, for example, cannot be met as long as this preventable cause of death is left largely unchecked. All of us--policymakers, parents, non-profit organizations, businesses and concerned citizens--can help prevent drowning. Explaining how is the goal of this guide. Building on the World Health Organization's 2014 Global report on drowning, the following pages provide practical, step-by-step guidance on how to implement 10 effective measures to prevent drowning. They range from community-based solutions, such as day care for children and barriers controlling access to water, to effective national policies and legislation around water safety, including setting and enforcing boating, shipping and ferry regulations. Data show that all of these solutions can help save lives. The more we work together to implement the measures outlined in this guide, the more lives can be saved. We urge all concerned to adopt as many of the interventions and strategies as their resources will allow, and to protect those most vulnerable without delay."--Page iv.

The New Consumers

The Influence Of Affluence On The Environment

Island Press While overconsumption by the developed world's roughly one billion inhabitants is an abiding problem, another one billion increasingly affluent "new consumers" in developing countries will place additional strains on the earth's resources, argue authors Norman Myers and Jennifer Kent in this important new book. *The New Consumers* examines the environmental impacts of this increased consumption, with particular focus on two commodities -- cars and meat -- that stand to have the most far-reaching effects. It analyzes consumption patterns in a number of different countries, with special emphasis on China and India (whose surging economies, as well as their large populations, are likely to account for exceptional growth in humanity's ecological footprint), and surveys big-picture issues such as the globalization of economies, consumer goods, and lifestyles. Ultimately, according to the orman Myers and Jennifer Kent, the challenge will be for all of humanity to transition to sustainable levels of consumption, for it is unrealistic to expect "new" consumers not to aspire to be like the "old" ones. Cogent in its analysis, *The New Consumers* issues a timely warning of a major and developing environmental trend, and suggests valuable strategies for ameliorating its effects.

American Psychiatric Association Practice Guidelines

American Psychiatric Publishing The aim of the American Psychiatric Association Practice Guideline series is to improve patient care. Guidelines provide a comprehensive synthesis of all available information relevant to the clinical topic. Practice guidelines can be vehicles for educating psychiatrists, other medical and mental health professionals, and the general public about appropriate and inappropriate treatments. The series also will identify those areas in which critical information is lacking and in which research could be expected to improve clinical decisions. The Practice Guidelines are also designed to help those charged with overseeing the utilization and reimbursement of psychiatric services to develop more scientifically based and clinically sensitive criteria.
