Bio-Diesel

Bio-degradable Alternative Fuel for Diesel Engines

Readworthy This is a well known fact that the resources of mineral oils are depleting day-by-day, and the cost of exploration of the remaining reserves is bound to escalate. Moreover, the burning of fossil fuels increases the level of carbon-dioxide in the atmosphere causing the 'Green House' effect. In this context, a viable and sustainable alternative fuel is necessary to cater to a large fleet of automobiles across the world. The advent of bio-diesel has come to the rescue in such a warranting situation. Efforts are being made to streamline the systems to produce bio-diesels at economically viable rates and apply them in running the diesel engines in lieu of petro-diesel. And the present study is an attempt in this direction. It seeks to exploit non-edible oil plants, especially Jatropha, mahua and palm, to replace diesel oil usage in the conventional diesel engines. Providing transesterification procedure for all the three non-edible oils, it deals with the heat release rate calculations based on the pressure data collected in the combustion chamber. It also extends discussion on the instrumentation and experimentation, as well as the results of the findings.

Cost, Effectiveness, and Deployment of Fuel Economy Technologies for Light-Duty Vehicles

National Academies Press The light-duty vehicle fleet is expected to undergo substantial technological changes over the next several decades. New powertrain designs, alternative fuels, advanced materials and significant changes to the vehicle body are being driven by increasingly stringent fuel economy and greenhouse gas emission standards. By the end of the next decade, cars and light-duty trucks will be more fuel efficient, weigh less, emit less air pollutants, have more safety features, and will be more expensive to purchase relative to current vehicles. Though the gasoline-powered spark ignition engine will continue to be the dominant powertrain configuration even through 2030, such vehicles will be equipped with advanced technologies, materials, electronics and controls, and aerodynamics. And by 2030, the deployment of alternative methods to propel and fuel vehicles and alternative modes of transportation, including autonomous vehicles, will be well underway. What are these new technologies - how will they work, and will some technologies be more effective than others? Written to inform The United States Department of Transportation's National Highway Traffic Safety Administration (NHTSA) and Environmental Protection Agency (EPA) Corporate Average Fuel Economy (CAFE) and greenhouse gas (GHG) emission standards, this new report from the National Research Council is a technical evaluation of costs, benefits, and implementation issues of fuel reduction technologies for next-generation light-duty vehicles. Cost, Effectiveness, and Deployment of Fuel Economy Technologies for Light-Duty Vehicles estimates the cost, potential efficiency improvements, and barriers to commercial deployment of technologies that might be employed from 2020 to 2030. This report describes these promising technologies and makes recommendations for their inclusion on the list of technologies applicable for the 2017-2025 CAFE standards.

The Japanese Automotive Industry

Model and Challenge for the Future?

U of M Center For Japanese Studies As the University of Michigan Center for Japanese Studies reflected on the deteriorating position of the domestic auto industry in the fall of 1980, and the strong competitive threat being posed by the Japanese automakers, we were struck by the extraordinary low quality of the public discussion of these critical issues. The national importance of the issues seemed only matched by the superficiality of the analyses being offered. The tendency to think in terms of scapegoats was particularly evident. The Japanese as the basic cause of our problems has been a particularly notable theme. To be sure, cooperation with the Japanese in formulating a rational overall trade policy may be an important part of the solution. It has also been fashionable to blame it all on American auto industry management for not concentrating on the production of small cars when "everyone knew" that was the thing to do. Alternatively, government meddling was blamed for all our problems. Clearly, the complex problem we faced required more penetrating analyses. It seemed therefore, that the time was ripe for a public seminar which moved beyond the rhetoric of the moment and probed some of the deeper causes of our problems and possible directions for future policy. In holding the January 1981 auto conference, the Center took it as their task to begin addressing the critical issues facing the industry, with particular, but not exclusive, attention to examining the role of the Japanese auto industry. They had in mind not to simply conduct a rational discussion of the trade issue but to probe the sources of Japanese competitive strength, especially those features whose study might profit them. In these proceedings, they bring those discussions to a wider audience. Question and answer sessions at the conference were necessarily short and a few speakers delivered abbreviated remarks; this volume restores a number of omissions, and provides additional answers to some pertinent questions put by the audience. The Center hopes to encourage the serious problem-solving these complex issues demand. Far too much time has been spent trying to fix the blame. [intro]

If Jesus Had a Dog

For almost two thousand years, there have been countless books written about our Lord; books by the authors of the four Gospels and the early church fathers, which tell of his words, his actions, and his miracles; books which tell of how he changed the lives of the authors and how he continues to change lives of their readers; and books which build on what he said and did called historical novels. I guess that this little short story is one of those. What If Jesus Did Have a Dog? One night, when I couldn't sleep, a very strange thought came to me. For some reason, I began to wonder, whether or not, Jesus may have had a dog. I've had a number of wonderful dogs in my life, and I can't think of a better pet, or a more loving friend. I once saw a comment written on a wall that said, "God spelled backwards is still your best friend." Dogs, like God himself, love unconditionally. And like God, they are always ready to forgive us. Even many centuries ago, dogs were held in great esteem by many people. The wealthy and powerful kept dogs mostly for protection, but ordinary people believed that dogs could be wonderful helpers and companions, as well as dear friends. This is a story about the birth of Jesus and the dog that he may have had.

Automotive Industrialisation

Industrial Policy and Development in Southeast Asia

Routledge This book looks at the industrial policies of Southeast Asian economies in their motor vehicle industries from early import substitution to policy-making under the more liberalised WTO policy regime. The book examines how inward automotive investment, especially from Japan, has been affected by policies, and how such investment has promoted industrial development in the late-industrialising economies within ASEAN (Association of Southeast Asian Nations). It provides insights into the automotive industry of Southeast Asia in terms of production volumes, sales volumes, market structure, and trade. Through country case studies, the book is a useful reference and illustrates how industrial policies in Southeast Asia have affected the spread of automotive development in the region. It will appeal to policy-makers and researchers interested in the automobile industry, industrial policies in the industry and the spread of development from foreign investors to local firms.
