Basics in Adolescent Medicine A Practical Manual of Signs, Symptoms and Solutions

World Scientific **This practical manual reviews salient topics in Adolescent Medicine. The volume is practitioner-centered, focusing on the symptoms that bring a teenager to the clinician. Every chapter begins with a very brief clinical vignette, highlighting the patient's chief complaint or primary issue of concern. The handbook is divided into five primary sections: (1) Well Adolescent Care to include chapters such as the Annual Physical and Immunizations in Adolescence; (2) Common Problems of Adolescence such as Acne and Low Back Pain; (3) Reproductive Health Care issues such as Menstrual Disorders and Teen Pregnancy/Options Counseling; (4) Urgent Care matters including Acute Chest Pain and Scrotal Pathology: Pain and Masses; and finally, (5) Special Considerations to include chapters such as Cyberbullying and Sexting and Tobacco Use and Cessation Counseling. Chapters follow a uniform format with vignette as described above, followed by multiple choice questions designed to test the readers knowledge. Salient features related to the chapter topic follow, including relevant clinical "pearls" such as history, physical exam, laboratory and diagnostic studies and treatment strategies. For each chapter, issues that are unique to managing illness in adolescents are highlighted to distinguish them from adults and younger children. When applicable, a**

broad differential diagnosis is provided to help guide the reader. Easy to read tables are included to highlight and clearly summarize key aspects of the topic and the chapters end with answers to the Board-Style questions presented at the start. Contents: Well Adolescent Care: The Annual Physical (Krishna White and Rita Hagler) Adolescent Consent and Confidentiality (Kirsten B Hawkins) Normal Nutrition through Adolescence (Erin Wolf-Barnett) Immunizations in Adolescents (Lawrence J D'Angelo) Taking Care of Adolescent Males (Daniel E Korin) Taking Care of Lesbian, Gay, Bisexual, Transgender and Questioning (LGBTQ) Teens (William M Barnes and David S Reitman) The Pre-Participation Sports Physical (Nailah Coleman) Sports Supplements (Gregg Joseph Montalto) Adolescent Driving (Tiffany L Meyer) The Transition to College (Isabel Goldenberg and Harshita J Saxena) The Adolescent Traveler and Immigrant (Natwarlal Shah) Common Problems: Short Stature/Delayed Onset of Puberty (Karen Bernstein) Tall Stature (Karen Bernstein) Abnormal Weight Gain (Harshita J Saxena) Abnormal Weight Loss/Malnutrition (Tomas J Silber) Bulimia (Rosina Pellerano) Anemia (Carleen Townsend-Akpan) Headaches: Common, Chronic and Recurrent (Stephanie Addison) Bell's Palsy (7th Nerve or Facial Nerve Palsy) (Jonathan Fanburg) Asthma, Exercise Induced Bronchospasm (EIB) and Vocal Cord Dysfunction (VCD) (Anthony P Acquavella) Gynecomastia (Amy L Weiss) Recurrent or Chronic Abdominal Pain (Oscar Taube) Constipation and Encopresis (Promise Ahlstrom) Enuresis (Promise Ahlstrom) Dysuria, Urinary Tract Infections and Pyelonephritis (Amy E Klamberg) Proteinuria (Lawrence J D'Angelo) Hematuria (Lawrence J. Key Features:Information is rapidly accessible. Uses bulleted lists format (as opposed to dense textbook paragraphs) and easy to read tables to allow for quick review in real time (while the clinician is with their patient)Interspersed multiple choice questions will enable readers to test their knowledge as they progress through the handbook. These questions, stylized after standard board questions, will thereby serve clinicians in real time while delivering patient care, but also serve as board-review material as students/clinicians prepare for in-service or board examinations for school or licensureRather than a rapidly aging bibliography, the volume provides a wide array of responsible web resources for the clinician to accessKeywords:Adolescent Medicine;Common Complaints;Screening;Assessments;Treatment Strategies;Practical Manual;Rapid Access Information;Multiple-Choice Board Style Questions

Handbook of Research on Children's and Young Adult Literature

Routledge This landmark volume is the first to bring together leading scholarship on children's and young adult literature from three intersecting disciplines: Education, English, and Library and Information Science. Distinguished by its multidisciplinary approach, it describes and analyzes the different aspects of literary reading, texts, and contexts to illuminate how the book is transformed within and across different academic figurations of reading and interpreting children's literature. Part one considers perspectives on readers and reading literature in home, school, library, and community settings. Part two introduces analytic frames for studying young adult novels, picturebooks, indigenous literature, graphic novels, and other genres. Chapters include commentary on literary experiences and creative production from renowned authors and

illustrators. Part three focuses on the social contexts of literary study, with chapters on censorship, awards, marketing, and literary museums. The singular contribution of this Handbook is to lay the groundwork for colleagues across disciplines to redraw the map of their separately figured worlds, thus to enlarge the scope of scholarship and dialogue as well as push ahead into uncharted territory.

Handbook of Adolescent Behavioral Problems

Evidence-Based Approaches to Prevention and Treatment

Springer **The Second Edition of the Handbook of Adolescent Behavioral Problems clarifies the current state of treatment and prevention through comprehensive examinations of mental disorders and dysfunctional behaviors as well as the varied forces affecting their development. New or revised chapters offer a basic framework for approaching mental health concerns in youth and provide the latest information on how conditions (e.g., bipolar disorder, suicidality, and OCD) and behaviors (e.g., sex offenses, gang activities, dating violence, and self-harm) manifest in adolescents. Each chapter offers diagnostic guidance, up-to-date findings on prevalence, biological/genetic aspects, risk and resilience factors, and a**

practical review of prevention and treatment methods. Best-practice recommendations clearly differentiate among what works, what might work, what doesn't work, and what needs further research across modalities, including pharmacotherapy. Key topics addressed include: Families and adolescent development. Adolescent mental health and the DSM-5. Oppositional Defiant Disorder and Conduct Disorder. Autism spectrum disorder. Media and technology addiction. School failure versus school success. Bullying and cyberbullying. The Second Edition of the *Handbook of Adolescent Behavior Problems* is a must-have reference for researchers, clinicians, allied practitioners and professionals, and graduate students in school and clinical child psychology, education, pediatrics, psychiatry, social work, school counseling, and public health.

An Encyclopedia of Contemporary Issues and Systems

Routledge This encyclopedia is the most current and exhaustive reference available on international education. It provides thorough, up-to-date coverage of key topics, concepts, and issues, as well as in-depth studies of approximately 180 national educational systems throughout the world. Articles examine education broadly and at all levels--from primary grades through higher education, formal to informal education, country studies to global organizations.

Communities in Action

Pathways to Health Equity

National Academies Press In the United States, some populations suffer from far greater disparities in health than others. Those disparities are caused not only by fundamental differences in health status across segments of the population, but also because of inequities in factors that impact health status, so-called determinants of health. Only part of an individual's health status depends on his or her behavior and choice; community-wide problems like poverty, unemployment, poor education, inadequate housing, poor public transportation, interpersonal violence, and decaying neighborhoods also contribute to health inequities, as well as the historic and ongoing interplay of structures, policies, and norms that shape lives. When these factors are not optimal in a community, it does not mean they are intractable: such inequities can be mitigated by social policies that can shape health in powerful ways. *Communities in Action: Pathways to Health*

Equity seeks to delineate the causes of and the solutions to health inequities in the United States. This report focuses on what communities can do to promote health equity, what actions are needed by the many and varied stakeholders that are part of communities or support them, as well as the root causes and structural barriers that need to be overcome.

Making Play Just Right: Activity Analysis, Creativity and Playfulness in Pediatric Occupational Therapy

Jones & Bartlett Learning "At the heart of **Making Play Just Right: Activity Analysis, Creativity, and Playfulness in Pediatric Occupational Therapy, Second Edition** is the belief that occupational therapists must incorporate play into interventions with children in order to ensure that pediatric occupational therapy is maximally effective. This text provides the background, history, evidence, and general knowledge needed to use a playful approach to pediatric occupational therapy, as well as the specific examples and recommendations needed to help therapists adopt these strategies. The authors provide a number of case examples and companion videos to allow the reader to engage in learning activities to improve understanding of the content"--

Investing in the Health and Well-Being of Young Adults

National Academies Press **Young adulthood - ages approximately 18 to 26 - is a critical period of development with long-lasting implications for a person's economic security, health and well-being. Young adults are key contributors to the nation's workforce and military services and, since many are parents, to the healthy development of the next generation. Although 'millennials' have received attention in the popular media in recent years, young adults are too rarely treated as a distinct population in**

policy, programs, and research. Instead, they are often grouped with adolescents or, more often, with all adults. Currently, the nation is experiencing economic restructuring, widening inequality, a rapidly rising ratio of older adults, and an increasingly diverse population. The possible transformative effects of these features make focus on young adults especially important. A systematic approach to understanding and responding to the unique circumstances and needs of today's young adults can help to pave the way to a more productive and equitable tomorrow for young adults in particular and our society at large. Investing in The Health and Well-Being of Young Adults describes what is meant by the term young adulthood, who young adults are, what they are doing, and what they need. This study recommends actions that nonprofit programs and federal, state, and local agencies can take to help young adults make a successful transition from adolescence to adulthood. According to this report, young adults should be considered as a separate group from adolescents and older adults. Investing in The Health and Well-Being of Young Adults makes the case that increased efforts to improve high school and college graduate rates and education and workforce development systems that are more closely tied to high-demand economic sectors will help this age group achieve greater opportunity and success. The report also discusses the health status of young adults and makes recommendations to develop evidence-based practices for young adults for medical and behavioral health, including preventions. What happens during the young adult years has profound implications for the rest of the life course, and the stability and progress of society at large depends on how any cohort of young adults fares as a whole. Investing in The Health and Well-Being of Young Adults will provide a roadmap to improving outcomes for this age group as they transition from adolescence to adulthood.

Textbook of Hospital Psychiatry

American Psychiatric Pub **With decreases in lengths of hospital stay and increases in alternatives to inpatient treatments, the field of hospital psychiatry has changed dramatically over the past 20 years. As the first comprehensive guide to be published in more than a decade, the Textbook of Hospital Psychiatry is a compilation of the latest trends, issues, and developments in the field. The textbook, written by 70 national experts and clinical specialists, covers a wide range of clinical and administrative topics that are central to today's practice of hospital psychiatry. This is the only textbook on the market today that provides information for psychiatric hospital clinicians and administrators in a single all-inclusive volume. It covers information not generally available in other textbooks and medical journals, touching on a variety of cutting-edge issues, such as safety improvement, use of seclusion and restraint, suicide prevention, and culturally competent psychiatric care. The book's 35 chapters are divided into four parts: Part I, Inpatient Practice -- focuses on specialty psychiatric units (e.g., acute stabilization unit, eating disorders unit, forensic unit, child unit), including the many psychopharmacological and psychosocial treatments used within each. This section also touches on specialized treatment for patients with co-occurring problems, such as substance abuse, developmental disabilities, and legal difficulties. Part II, Special Clinical Issues -- covers clinical issues from the perspective of different populations (consumers, families, suicidal patients). This section also examines the recent trend toward patient-centered care. Part III, The Continuum of Care -- addresses psychiatric services within the community, such as rehabilitation programs, day hospitals, and emergency services. It discusses the importance of understanding hospital-based treatment within the broader perspective of patients' lives. Part IV, Structure and Infrastructure -- focuses on such often-overlooked topics as financing of care, risk management, electronic medical records, and the actual architecture of psychiatric hospitals, as well as the roles of psychiatric hospital administrators, psychiatric nurses, and psychiatrists and psychologists. An invaluable resource for both clinicians and administrators, as well as a comprehensive teaching tool for residents, the Textbook of Hospital Psychiatry is a must-have for all professionals who work in psychiatric settings.**

The Men Who Stare at Goats

Simon and Schuster **Bizarre military history:** In 1979, a crack commando unit was established by the most gifted minds within the U.S. Army. Defying all known laws of physics and accepted military practice, they believed that a soldier could adopt the cloak of invisibility, pass cleanly through walls, and—perhaps most chillingly—kill goats just by staring at them. They were the First Earth Battalion, entrusted with defending America from all known adversaries. And they really weren't joking. What's more, they're back—and they're fighting the War on Terror. An uproarious exploration of American military paranoia: With investigations ranging from the mysterious "Goat Lab," to Uri Geller's covert psychic work with the CIA, to the increasingly bizarre role played by a succession of U.S. presidents, this might just be the funniest, most unsettling book you will ever read—if only because it is all true and is still happening today.

Review defines distance education as institutionally-based formal education in which the learning group is separated and interactive technologies are used to unite the learning group.

Membrane Organization and Dynamics

Springer **This volume brings together information on membrane organization and dynamics from a variety of spectroscopic, microscopic and simulation approaches, spanning a broad range of time scales. The implication of such dynamic information on membrane function in health and disease is a topic of contemporary interest. The chapters cover various aspects of membrane lipid and protein dynamics, explored using a battery of experimental and theoretical approaches. The synthesis of information and knowledge gained by utilizing multiple approaches will provide the reader with a comprehensive understanding of the underlying membrane dynamics and function, which will help to develop robust dynamic models for the understanding of membrane function in healthy and diseased states. In the last few years, crystal structures of an impressive number of membrane proteins have been reported, thanks to tremendous advances in membrane protein crystallization techniques. Some of these recently solved structures belong to the G protein-coupled receptor (GPCR) family, which are particularly difficult to crystallize due to their intrinsic flexibility. Nonetheless, these static structures do not provide the necessary information to understand the function of membrane proteins in the complex membrane milieu. This volume will address the dynamic nature of membrane proteins within the membrane and will provide the reader with an up-to date overview of the theory and practical approaches that can be used. This volume will be invaluable to researchers working in a wide range of scientific areas, from biochemistry and molecular biology to biophysics and protein science. Students of these fields will also find this volume very useful. This book will also be of great use to those who are interested in the dynamic nature of biological processes.**

Addiction Counseling Review Preparing for Comprehensive, Certification, and Licensing Examinations

Routledge **Addiction Counseling Review: Preparing for Comprehensive, Certification, and Licensing Examinations** offers a clear, readable overview of the knowledge and skills those training as alcohol or other drug counselors need to pass their final degree program, certification, and licensing examinations. It is organized into six sections: Addiction Basics, Personality Development and Drugs, Common Client Problems, Counseling Theories and Skills, Treatment Resources, and Career Issues. Each chapter includes challenging study questions that enable readers to assess their own level of understanding, including true/false, multiple choice, and provocative discussion questions. Each chapter also provides a glossary of key terms and, in addition to references, annotated suggestions for further reading and Web site exploration. This book will be a resource to which students and trainees will go on referring to long after it has helped them through their examinations. In addition, faculty and established professionals will find it a useful one-stop summary of current thinking about best practice.

Handbook of Pediatric Psychology in School Settings

Routledge **In recent years the escalating costs of health care have caused managed care programs to shift the delivery of pediatric psychological services away from specialized medical centers and into primary care and**

school settings. One result has been a radical expansion of school psychology into issues of clinical intervention, health promotion, and the assessment of psychotropic medications. School psychologists are now expected to either deliver or (more likely) to provide consultation regarding a wide variety of pediatric psychological services. Because this is a recent phenomenon, very few school-based psychologists or allied health practitioners (school counselors and social workers) have received training in pediatric psychology. The mission of this book is to provide them with a comprehensive and authoritative guide to their newly acquired responsibilities in such areas as psychotherapy, psychopharmacology, health promotion, and prevention of disease. This book is appropriate for anyone concerned with issues of pediatric psychology in school settings: school psychologists, pediatric psychologists, clinical child psychologists, as well as pediatricians and child psychiatrists.

Handbook of Life Course Health Development

Springer This book is open access under a CC BY 4.0 license. This handbook synthesizes and analyzes the growing knowledge base on life course health development (LCHD) from the prenatal period through emerging adulthood, with implications for clinical practice and public health. It presents LCHD as an innovative field with a sound theoretical framework for understanding wellness and disease from a lifespan perspective, replacing previous medical, biopsychosocial, and early genomic models of health. Interdisciplinary chapters discuss major health concerns (diabetes, obesity), important less-studied conditions (hearing, kidney health), and large-scale issues (nutrition, adversity) from a lifespan viewpoint. In addition, chapters address methodological approaches and challenges by analyzing existing measures, studies, and surveys. The book concludes with the editors' research agenda that proposes priorities for future LCHD research and its application to health care practice and health policy. Topics featured in the Handbook include: The prenatal period and its effect on child obesity and metabolic outcomes. Pregnancy complications and their effect on women's cardiovascular health. A multi-level approach for obesity prevention in children. Application of the LCHD framework to autism spectrum disorder. Socioeconomic disadvantage and its influence on health development across the lifespan. The importance of nutrition to optimal health development across the lifespan. The Handbook of Life Course Health Development is a must-have resource for researchers, clinicians/professionals, and graduate students in developmental psychology/science; maternal and child health; social work; health economics; educational policy and politics; and medical law as well as many interrelated subdisciplines in psychology, medicine, public health, mental health, education, social welfare, economics, sociology, and law.

The final volume contains over 800 pages of

documentation, interwoven with text and data addressing the adverse health consequences of tobacco use by children and young adults. It includes research on a variety of topics, including nicotine addiction, trends in cigarette smoking among young adults, trends in smokeless tobacco use and cigar smoking over time, genetic factors in tobacco use among youth, and mass media influence on smoking to this age group to name a few. This third volume is rich with table data research findings to support the Surgeon General's concerns with America's use and tobacco. Parenting Matters

Supporting Parents of Children Ages 0-8

National Academies Press Decades of research have demonstrated that the parent-child dyad and the environment of the family "which includes all primary caregivers" are at the foundation of children's well-being and

healthy development. From birth, children are learning and rely on parents and the other caregivers in their lives to protect and care for them. The impact of parents may never be greater than during the earliest years of life, when a child's brain is rapidly developing and when nearly all of her or his experiences are created and shaped by parents and the family environment. Parents help children build and refine their knowledge and skills, charting a trajectory for their health and well-being during childhood and beyond. The experience of parenting also impacts parents themselves. For instance, parenting can enrich and give focus to parents' lives; generate stress or calm; and create any number of emotions, including feelings of happiness, sadness, fulfillment, and anger. Parenting of young children today takes place in the context of significant ongoing developments. These include: a rapidly growing body of science on early childhood, increases in funding for programs and services for families, changing demographics of the U.S. population, and greater diversity of family structure. Additionally, parenting is increasingly being shaped by technology and increased access to information about parenting. Parenting Matters identifies parenting knowledge, attitudes, and practices associated with positive developmental outcomes in children ages 0-8; universal/preventive and targeted strategies used in a variety of settings that have been effective with parents of young children and that support the identified knowledge, attitudes, and practices; and barriers to and facilitators for parents' use of practices that lead to healthy child outcomes as well as their participation in effective programs and services. This report makes recommendations directed at an array of stakeholders, for promoting the wide-scale adoption of effective programs and services for parents and on areas that warrant further research to inform policy and practice. It is meant to serve as a roadmap for the future of parenting policy, research, and practice in the United States.
