CO2 Storage in Carboniferous Formations and Abandoned Coal Mines

CRC Press Underground geological storage of carbon dioxide (CO2) has considerable potential for mitigating climate change. CO2 can be safely injected and stored at well characterized and properly managed sites. Injecting carbon dioxide in deep geological formations can store it underground for long periods of time. Depleted oil and gas reservoirs, saline aquifers and carboniferous formations can be used for storage of CO2, as well as in abandoned coal mines. At depths below about 800-1000m, CO2 has a liquid-like density that permits the efficient use of underground reservoirs in porous sedimentary rocks. The papers in the present volume are from leading experts in the field of CO2 storage and were presented at an International Workshop on CO2 Storage in Carboniferous Formations and Abandoned Coal Mines (Beijing, China, 8-9 January 2011). CO2 storage in abandoned coal mines appears to have a bright future. Although CO2 Storage in Carboniferous Formations and Abandoned Coal Mines is primarily intended for mining engineers, environmental engineers and engineering geologists, the book will also be useful to civil engineers, and academics and professionals in geophysics and geochemistry.

The Armed Forces: Instrument of Peace, Strength, Development and Prosperity

Author House Across the ages, technological developments have been accelerated by the military. This results from the fact that able-bodied vibrant youths are generally involved and are also exposed to high-tech training prevailing at their times for assignments (defence and security) that are essential but not desired. They form the Armed Forces for the nations. Such brilliant military officers like Caesar and Napoleon made their marks; and, in contemporary times, the Armed Forces of United States, France, Britain, Australia, etc are making remarkable contributions to technological developments. Such infrastructure as the Internet, the GPS and the cell phones are products that have significant military contributions. This book scans across the major regions of the world, highlights the efforts of representative countries in the regions and observes that nations that have harnessed the efforts of their Armed Forces have progressively developed. It is also observed that developments in America and Europe, though not entirely dependent on their Armed Forces, have been greatly affected by their efforts. In Asia, such countries as the People's Republic of China, Brazil, India, Pakistan and Singapore utilise the human and material resources within the Armed Forces for national growth and cohesion. Development effort is least in the African Region, except South Africa and Egypt; notwithstanding the high potentials as exhibited by Nigeria's Armed Forces. Although attempts to industrialise through the Armed Forces may be able to create economic development for developing nations, such factors as historical background, economic resources, political climate, government policies and infrastructure are equally important. Economic development programme of an aspiring country should: i. promote education and access to knowledge ii. aspire to economic self-sufficiency in economic power iii. allow and promote private sector and foreign participation in defence production, research and development iv. commit itself to the establishment and support of defence industries v. indigenise defence programmes, establish a balance between military and economic development and vi. mobilise the nation's economy through technology partnership with the private sector and foreign investors.

Strengthening Forensic Science in the United States

A Path Forward

National Academies Press Scores of talented and dedicated people serve the forensic science community, performing vitally important work. However, they are often constrained by lack of adequate resources, sound policies, and national support. It is clear that change and advancements, both systematic and scientific, are needed in a number of forensic science disciplines to ensure the reliability of work, establish enforceable standards, and promote best practices with consistent application. *Strengthening Forensic Science in the United States: A Path Forward* provides a detailed plan for addressing these needs and suggests the creation of a new government entity, the National Institute of Forensic Science, to establish and enforce standards within the forensic science community. The benefits of improving and regulating the forensic science disciplines are clear: assisting law enforcement officials, enhancing homeland security, and reducing the risk of wrongful conviction and exoneration. *Strengthening Forensic Science in the United States* gives a full account of what is needed to advance the forensic science disciplines, including upgrading of systems and organizational structures, better training, widespread adoption of uniform and enforceable best practices, and mandatory certification and accreditation programs. While this book provides an essential call-to-action for congress and policy makers, it also serves as a vital tool for law enforcement agencies, criminal prosecutors and attorneys, and forensic science educators.

The End of Project Overruns

Lean and Beyond for Engineering, Procurement, and Construction

Universal-Publishers Applying the principles in this book unleashes ingenuity that achieves, solidifies and perpetuates a new performance culture of mutual benefit. In this culture, project teams will prepare their work in task packages and enable workflow necessary to leave inefficiency of time and resource, literally, no place to hide. Project examples will help teams implement the principles that shorten cycle times, eliminate error, improve quality and reduce costs to succeed in meeting project commitments. Emerging Lean enterprise relationships between clients, EPC contractors and their entire supply chain will advance what constitutes the new, market-differentiating performance of individuals, project teams and companies - justifying high levels of trust and inter-organizational efforts to improve. Client executives will learn to recognize root causes of risk and sources of excellence to mitigate them. Well-developed strategic improvement is often constrained because the traditional way - current means and methods - fit squarely in everyone's comfort zone. By learning to ask the right questions, top-client leadership will soon render overruns from the best traditional systems as "not-good enough" and strive for a new level of excellence. EPC executives will better engage creative voices from their best resources and stakeholders to resolve all concerns and define a unified vision for how to deliver on clients' expectations without overruns during capital project delivery. Lean methods will effectively assure that vision, principles and best expectations are understood and implemented at the workforce. Department, discipline and stakeholder leaders will align and no longer frustrate each other and their clients. They will plan and execute with increased efficiency and effectiveness. Cost reduction will accelerate, retaining only client-valued quality - enabling a nimble response to market opportunities and threats. Project and program managers will confidently accept intense, market-induced cost and schedule-reduction efforts. They will apply new metrics, measure potential and extract, align and pilot improvements. They will make workforce progress transparent to simplify resource balancing, full utilization and workforce flow during all project phases. The results will differentiate team members and their project's performance on the world stage. Project professionals and the skilled labor force will gain confidence to make and keep increasingly difficult commitments and experience thereby increasing opportunity in an organization known for excellence. They will fully engage heart and mind for leaders who expect excellence and they trust to enable and reward best practice performance while they jointly eliminate root causes of problems before they happen. This book guides readers through each essential role for the transformation to Lean...not just at the lowest levels but of the entire business model and all the supporting processes. Resulting market recognition of sustained excellence of people, their systems and they way they work together will create a market-leading force.
