## Organizational Auditing and Assurance in the Digital Age

IGI Global Auditing is constantly and quickly changing due to the continuous evolution of information and communication technologies. As the auditing process is forced to adapt to these changes, issues have arisen that lead to a decrease in the auditing effectiveness and efficiency, leading to a greater dissatisfaction among users. More research is needed to provide effective management and mitigation of the risk associated to organizational transactions and to assign a more reliable and accurate character to the execution of business transactions and processes. Organizational Auditing and Assurance in the Digital Age is an essential reference source that discusses challenges, identifies opportunities, and presents solutions in relation to issues in auditing, information systems auditing, and assurance services and provides best practices for ensuring accountability, accuracy, and transparency. Featuring research on topics such as forensic auditing, financial services, and corporate governance, this book is ideally designed for internal and external auditors, assurance providers, managers, risk managers, academicians, professionals, and students.

## A diagnostic tool for implementing an ecosystem approach to fisheries through policy and legal frameworks

Food & Agriculture Org. The implementation of an ecosystem approach to fisheries (EAF) contributes to sustainable fisheries in various ways. One of them is by reviewing national policy and legal instruments to identify gaps which prevent a country from progressing towards full alignment with, and implementation of, an EAF. This diagnostic tool builds on the previous work of FAO by translating the 17 EAF components identified in the How-to Guide on legislating for an EAF into an EAF Legal Checklist for legal practitioners, policymakers and fisheries managers to use in conducting a preliminary assessment of selected policy and legal instruments and determining whether they are congruent an EAF. The outcomes of the assessment may result in decisions to amend existing national policies and/or legislation, or develop new policy and legal instruments that are aligned with the 17 EAF components, to ensure the full implementation of an EAF towards improving, in a holistic way, the conservation and sustainable use of marine resources, biodiversity and ecosystems.

## Management and Technologies of Water, Wastewater, Waste and Cir-cular Economy

## WWW&CE

BoD – Books on Demand Around 99 % of all EU companies are SMEs which provide up to 70 % of all jobs. Generally, SMEs have good future growth prospects, however they are specifically well equipped to solve environmental problems, hence grow in the green economy. Nowadays, the biggest bottleneck is the significant skills shortage in most economic sectors while job vacancies in SMEs and overall unemployment, in particular youth unemployment, is steadily growing. A result of cooperation between educational institutions and industry entities, work-based learning has become a prominent tool to eliminate bottlenecks and create conditions for further growth in innovative market segments. To continuously coordinate education and skills requirements, and address skills shortages, higher education institutions along with education and training providers, and economic chambers from 7 countries built up and established an alliance for the following sectors: "Water, Wastewater, Waste and Circular Economy". This alliance was then extended to 13 countries with 74 education and labour market actors and continues to perform its duties as the "Eco Innovation" centre of competence in the long term. This publication contains the relevant curricula, application notes and experiences as a result of the project WWW&CE with the following partners: Hanse-Parlament (DE), Panevezys Chamber of Commerce, Industry and Crafts (LT), Vilnius Gediminas Technical University (LT), Vilnius Builder Trainings centre (LT), Hungarian Association of Craftsmen Corporation (HU), Kontiki-Szakkepző Zrt (HU), Chamber of Craftmanship and Enterprise in Bialystok (PL), Bialystok Foundation of Professional Training (PL), Nordic Forum of Crafts (NO), Satakunta University of Applied Sciences (FI), Wirtschafts-Förderungsinstitut der Wirtschaftskammer Steiermark (AT).

## From Methods to Applications

John Wiley & Sons A practical, real-world guide for implementing enterprise risk management (ERM) programs into your organization Enterprise risk management (ERM) is a complex yet critical issue that all companies must deal with in the twenty-first century. Failure to properly manage risk continues to plague corporations around the world. ERM empowers risk professionals to balance risks with rewards and balance people with processes. But to master the numerous aspects of enterprise risk management, you must integrate it into the culture and operations of the business. No one knows this better than risk management expert James Lam, and now, with *Implementing Enterprise Risk Management: From Methods to Applications*, he distills more than thirty years' worth of experience in the field to give risk professionals a clear understanding of how to implement an enterprise risk management program for every business. Offers valuable insights on solving real-world business problems using ERM Effectively addresses how to develop specific ERM tools Contains a significant number of case studies to help with practical implementation of an ERM program While *Enterprise Risk Management: From Incentives to Controls*, Second Edition focuses on the "what" of ERM, *Implementing Enterprise Risk Management: From Methods to Applications* will help you focus on the "how." Together, these two resources can help you meet the enterprise-wide risk management challenge head on—and succeed.

## Implementing the Convention on International Trade in Endangered Species of Wild Fauna and Flora through national fisheries legal frameworks

## A study and a guide

Food & Agriculture Org. An increasing number of commercially exploited and managed aquatic species has been listed in the Appendices to the Convention on International Trade in Endangered Species of Wild Fauna and Flora (CITES), triggering the attention from the fisheries sector of States on how listing would impact on the management of the relevant fisheries. CITES regulates international trade in certain aquatic species, including those which are, and can be, commercially exploited and which are being managed by the fisheries sector. The fisheries sector legal frameworks will have to recognize and enable the various requirements provided for in CITES, including the making of non-detriment findings and ensuring that there is a designated management authority and scientific authority to take certain decisions in respect of listed commercially exploited and managed aquatic species. This sourcebook provides clarifications on the relationship of CITES with the fisheries sector and provides guidance on how national fisheries legal frameworks can optimize the implementation of CITES. The realisation of this sourcebook in 2020, designated as a "super year" for nature and biodiversity, represents a timely and useful contribution to fisheries management, by (i) raising awareness of CITES; (ii) enhancing comprehension of the CITES regime and its relationship with the fisheries sector and (iii) where a deliberate decision is made by a country to implement CITES through its national

### Global Strategic Trade Management

### How India Adjusts its Export Control System for Accommodation in the Global System

[Springer This book examines whether India is successfully integrating and adapting to the global strategic management system. It offers essential insights into the evolution of export controls for goods, which may have implications for the development of Weapons of Mass Destruction – an aspect that is especially relevant given India's robust biotechnological, chemical and nuclear industrial base. In security studies, the phrase "strategic trade management" is now slowly replacing the phrase "export control". However, for the policymaking community, export control remains popular, at least for the sake of reference. The book also describes the mechanisms India is adopting in this regard. It demonstrates the shift in the Indian approach to strategic trade management, from an outspoken critic to a supporter. Politically, the country was initially skeptical of the idea of export controls because it was a target of such systems. The book also explains the tools, forces and incentives that moved India to adapt its policy on export controls or strategic trade management.](#)

## Innovative Solutions for Implementing Global Supply Chains in Emerging Markets

IGI Global Advancements in the field of information technology have transformed the way businesses interact with each other and their customers. Businesses now require customized products and services to reflect their constantly changing environment, yet this results in cutting-edge products with relatively short lifecycles. Innovative Solutions for Implementing Global Supply Chains in Emerging Markets addresses the roles of knowledge management and information technology within emerging markets. This forward-thinking title explores the current trends in supply chain management, knowledge acquisition and transfer mechanisms among supply chain partners, and knowledge management paradigms. This book is an invaluable resource for researchers, business professionals and students, business analysts, and marketing professionals.

## Safety and Security of Cyber-Physical Systems

## Engineering dependable Software using Principle-based Development

Springer Nature Cyber-physical systems (CPSs) consist of software-controlled computing devices communicating with each other and interacting with the physical world through sensors and actuators. A CPS has, therefore, two parts: The cyber part implementing most of the functionality and the physical part, i.e., the real world. Typical examples of CPS's are a water treatment plant, an unmanned aerial vehicle, and a heart pacemaker. Because most of the functionality is implemented in software, the software is of crucial importance. The software determines the functionality and many CPS properties, such as safety, security, performance, real-time behavior, etc. Therefore, avoiding safety accidents and security incidents in the CPS requires highly dependable software. Methodology Today, many methodologies for developing safe and secure software are in use. As software engineering slowly becomes disciplined and mature, generally accepted construction principles have emerged. This monograph advocates principle-based engineering for the development and operation of dependable software. No new development process is suggested, but integrating security and safety principles into existing development processes is demonstrated. Safety and Security Principles At the core of this monograph are the engineering principles. A total of 62 principles are introduced and catalogized into five categories: Business & organization, general principles, safety, security, and risk management principles. The principles are rigorous, teachable, and enforceable. The terminology used is precisely defined. The material is supported by numerous examples and enriched by illustrative quotes from celebrities in the field. Final Words «In a cyber-physical system's safety and security, any compromise is a planned disaster» Audience First, this monograph is for organizations that want to improve their methodologies to build safe and secure software for mission-critical cyber-physical systems. Second, the material is suitable for a two-semester, 4 hours/week, advanced computer science lecture at a Technical University. This textbook has been recommended and developed for university courses in Germany, Austria and Switzerland.

## Global Waste Management Outlook

United Nations The Global Waste Management Outlook is the first comprehensive, impartial and in-depth assessment of global waste management. It reflects the collective body of recent scientific knowledge, drawing on the work of leading experts and the vast body of research undertaken within and beyond the United Nations system. The six chapters inform the reader about trends, provide an analysis on governance and financial mechanisms, and offer policy advice on the way forward. The main document targeting professionals is accompanied by two summary documents, one for decision makers and the other for the public more broadly. This Global Waste Management Outlook offers a profound analysis of the enormous potential better waste management provides to assist in meeting the sustainability challenges ahead.

## Handbook of Chronic Kidney Disease Management

Lippincott Williams & Wilkins "It was an enormous privilege and an intellectual feast to interact with the eminent contributors to this Handbook who somehow managed to find time in their busy schedules to distill for us their knowledge and expertise regarding all aspects of diagnosing, treating, and preventing progression of CKD. It was our goal to develop a book that would be useful across the world, and special effort was made to recruit authors from various parts of the globe to better reflect the range of practices and problems encountered in different countries. Strict attention was paid to referencing not only U.S. guidelines, but also those in the United Kingdom, Europe, Canada, and Australia, and to express laboratory values using both metric and SI units"--Provided by publisher.

## Towards applying a green infrastructure approach in the Gauteng City-Region

Gauteng City Region Observatory (GCRO) In the context of heightened climate variability, thinking about ways to redesign our urban areas with more sustainable infrastructure solutions is becoming more and more important. Green infrastructure (GI) is emerging as an alternative approach to traditional ('grey') infrastructure in urban planning and development. Its emergence can be understood in terms of the growing demand for infrastructure and services, increased concerns over natural resource constraints and climate change, and the negative impacts associated with traditional approaches to designing and building cities. It has been proposed that GI can provide the same services as traditional infrastructure at a similar capital cost, while also providing a range of additional benefits. However, despite the increasing examples of successful urban GI applications, traditional infrastructure continues to dominate due to the lack of systematic evidence to support GI implementation. As a result, there has been an increase in calls from policy- and decision-makers for a greater evidence base on the benefits of GI, as well as for practical guidelines on its implementation. 'Towards applying a green infrastructure approach in the Gauteng City-Region' is the GCRO's third report in its ongoing research into 'Green assets and infrastructure'. The first two reports in this project series were more theoretically grounded and policy-oriented, whereas this third report is more practical in nature. The first report explored the basic principles around GI, assessed the extent of ecological features in Gauteng and the way governments in the province think about planning and maintenance of green assets. The second report responded to some of the challenges identified in the first report, and in particular the importance of government officials and practitioners in exploring how international green infrastructure plans could be applied in the Gauteng context. This third report builds on the findings of the aforementioned reports and the project's CityLab series, which highlighted the need to build an evidence base as critical for garnering support for and as well as enhancing investment in the GI approach. Unlike the more theoretically grounded earlier reports, this report comprises four technical sections and practical reflections on how a GI approach could be incorporated into urban planning in the GCR and in other similar urban contexts.

## Implementing Integrated Reporting

## Lessons from the Field

Springer Nature Sustainability, the environment, corporate accountability, social justice, integration – these are the buzzwords of our century. This book takes readers on a journey through the landscape of standard-setting giants and corporate reporting paradigms through the eyes of two companies that have taken very different paths toward integrated thinking. Both stories provide new insights into the transition to integrated reporting, as envisaged by the International Integrated Reporting Council (IIRC), and how integrated reporting is reshaping our views on transparency. However, the top-down approach adopted in studies of integrated reporting in practice has left many questions unanswered: Is it effective? How does it evolve into established practice? Is it just another management fad? This bottom-up critique answers all these questions and one more: Could integrated reporting become the corporate reporting norm? We shall see. Given its depth of coverage, the book appeals to IIRC academic community, participants in integrated reporting networks, and others interested in integrated reporting.

## Palliative Care for Chronic Cancer Patients in the Community

## Global Approaches and Future Applications

Springer Nature The new global cancer data suggests that the global burden has risen to 18.1 million new cases per year and 9.6 million cancer deaths per year. A number of factors appear to be driving this increase, in particular, a growing and aging global population and an increase of exposure to cancer risk factors linked to social and economic development. For rapidly-growing economies, the data suggests a shift from poverty- or infection-related cancers to those associated with lifestyles more typical in industrialized countries. There is still large geographical diversity in cancer occurrence and variations in the magnitude and profile of the disease between and within world regions. There are specific types of cancer that dominate globally: lung, female breast and colorectal cancer, and the regional variations in common cancer types signal the extent to which societal, economic and lifestyle changes interplay to differentially impact on the profile of this most complex group of diseases. Unfortunately, despite advances in cancer care, a significant proportion of patients at home, experience sub-optimal outcomes. Barriers to successful treatment outcomes include, but are not limited to: access to oncologists in the primary health centers, non-adherence, lack of experienced oncology and palliative care nurses in the community, inadequate monitoring and the lack of training of family and pediatric physicians. Telemedicine approaches, including telephone triage/education, telemonitoring, teleconsultation and status tracking through mobile applications, have shown promise in further improving outcomes, in particular for chronic cancer patients following their hospitalization. Lessons can be learned from existing hospices in North America, the United Kingdom, Australia, Centers of Excellence in African (Uganda) and modern community services in India (Kerala). An important goal of this book is to describe and encourage professionals to develop new community programs in palliative care, which include training and empowering physicians and nurses in the community on the principles of palliative care. The Middle East Cancer Consortium (MECC) together with the American Society of Clinical Oncology (ASCO) and the American Oncology Nursing Society (ONS) have conducted multiple courses ranging from basic palliative care to more specialized training in palliative care for multiple nationalities in Europe, Asia and Africa. Our experience clearly indicates that, to promote such activities, one needs strong leadership and confirmed political will to support the endeavor. The new book will emphasize the importance of having a core of multiple stakeholders including community leaders, government, NGOs and media to be actively involved in advocating for the cause and generating public awareness. This text will provide the reader with a comprehensive understanding of the outside-of-the-hospital treatment of cancer patients by medical, paramedical and volunteer personnel. In doing so, this text will encourage the creation of new palliative care services improving upon the existing ones and stimulate further research in this field. Part 1 of the text will begin with an overview of the current state of affairs of services provided to cancer patients while being cared for by primary health centers. It will also review the current literature regarding medical and psychological-based therapy options in the community for cancer patients at different stages of their disease. Part 2 will address the unique role of the community nurse, within the framework of the multidisciplinary team treating the patient, in the attempt to provide optimal evaluation and care in very challenging situations (such as with terminal patients). Part 3 will provide insightful models of this new discipline and serve as a valuable resource for physicians, nurses, social workers and others involved in the care of cancer patients. The book will take a multidisciplinary approach, integrating clinical and environmental data for practical management to enhance the efficacy of treatment while relieving suffering. Part 4 will also discuss the application of modern technological approaches to track symptoms, quality of life, diet, mobility, duration of sleep and medication use (including pain killers) in chronic cancer patients in the community. Part 5 of the book will also be devoted to modes of developing a collaborative program between governmental and non-governmental organization sectors. This includes volunteer workers in close collaboration with medical professionals for providing emotional and spiritual support, nursing care, nutritional support and empowering family caregivers. Such a model makes palliative care in the community a "people's movement", thus transferring part of the

responsibility and ownership to the community.
