So when potato blight struck, causing the tubers to rot in the ground, they suffered a grievous loss. Thus began a catastrophe in which approximately one million people lost their lives and many more left Ireland for North America, changing the country forever. During and after this terrible human crisis, the British government was bitterly accused of not averting the disaster or offering enough aid. Some even believed that the Whig government's policies were tantamount to genocide against the Irish population. James Donnelly's account looks closely at the political and social consequences of the great Irish potato famine and explores the way that natural disasters and government responses to them can alter the destiny of nations. **Out of My Mind Simon and Schuster** Considered by many to be mentally retarded, a brilliant, impatient fifth-grader with cerebral palsy discovers a technological device that will allow her to speak for the first time. **Everything Bad is Good for You How Popular Culture is Making Us Smarter Penguin UK** Putting forward an alternative to the endless complaints about reality TV, throwaway movies and violent video games, this book shows that mass culture is actually more sophisticated and challenging than ever before. **The History and Social Influence of the Potato Cambridge University Press** A reissue of a scholarly classic considers the influence of the potato on the social structure and economy throughout history wherever men adopted it as a mainstay of their diets. **Supertato Simon and Schuster** The first book in the bestselling SUPERTATO series! This book provides a fresh, updated and science-based perspective on the current status and prospects of the diverse array of topics related to the potato, and was written by distinguished scientists with hands-on global experience in research aspects related to potato. The potato is the third most important global food crop in terms of consumption. Being the only vegetatively propagated species among the world's main five staple crops creates both issues and opportunities for the potato: on the one hand, this constrains the speed of its geographic expansion and its options for international commercialization and distribution when compared with commodity crops such as maize, wheat or rice. On the other, it provides an effective insulation against speculation and unforeseen spikes in commodity prices, since the potato does not represent a good traded on global markets. These two factors highlight the underappreciated and underrated role of the potato as a dependable nutrition security crop, one that can mitigate turmoil in world food supply and demand and political instability in some developing countries. Increasingly, the global role of the potato has expanded from a profitable crop in developing countries to a crop providing income and nutrition security in developing ones. This book will appeal to academics and students of crop sciences, but also policy makers and other stakeholders involved in the potato and its contribution to humankind's food security. **Pinch of Nom 100 Slimming, Home-style Recipes Pan Macmillan** THE #1 FASTEST SELLING NON-FICTION BOOK IN THE UK Slimming food has never tasted so good; the must-have first cookbook from the UK's most visited food blog. Peeling Potatoes Or Grinding Lenses Spinoza and Young Wittgenstein Converse on Immanence and Its Logic University of Pittsburgh Pre "I can work best now while peeling potatoes. . . . It is for me what lens-grinding was for Spinoza."—L. Wittgenstein More than 250 years separate the publication of Baruch Spinoza's *Ethics* and Ludwig Wittgenstein's *Tractatus Logico-Philosophicus*. < Both are considered monumental philosophical treatises, produced during markedly different times in human history, and notoriously challenging to interpret. In *Peeling Potatoes or Grinding Lenses*, Aristides Baltas contends that these works bear a striking similarity based on the idea of "radical immanence." Each purports to understand the world, thought, and language from the inside and in a way leading to the dissolution of all philosophy. In that guise, both offer a powerful argument against fundamentalism of all sorts and kinds. To Spinoza, God is just Nature. God is not above or separate from the world, humanity, or mere objects for, as Nature, He inheres in everything. To Wittgenstein, logic is not above or separate from language, thought, and the world. The hardness of the logical "must" inheres in states of affairs, facts, thoughts, and linguistic acts. Outside there are no truths or sense—only nonsense. Through close readings of the texts based on lessons drawn from radical paradigm change in science, Baltas finds in both works a single-minded purpose, implacable reasoning, and an austerity of style that are rare in the history of philosophy. He analyzes the structure and content of each treatise, the authors' intentions, the limitations and possibilities afforded by scientific discovery in their respective eras, their radical opposition to prevailing philosophical views, and draws out the particulars, as well as the implications, of the arresting match between the two.

The Big Ratchet How Humanity Thrives in the Face of Natural Crisis Hachette UK How an ordinary mammal manipulated nature to become technologically sophisticated city-dwellers -- and why our history points to an optimistic future in the face of environmental crisis Our species long lived on the edge of starvation. Now we produce enough food for all 7 billion of us to eat nearly 3,000 calories every day. This is such an astonishing thing in the history of life as to verge on the miraculous. *The Big Ratchet* is the story of how it happened, of the ratchets -- the technologies and innovations, big and small -- that propelled our species from hunters and gatherers on the savannahs of Africa to shoppers in the aisles of the supermarket. *The Big Ratchet* itself came in the twentieth century, when a range of technologies -- from fossil fuels to scientific plant breeding to nitrogen fertilizers -- combined to nearly quadruple our population in a century, and to grow our food supply even faster. To some, these technologies are a sign of our greatness; to others, of our hubris. MacArthur fellow and Columbia University professor Ruth DeFries argues that the debate is the wrong one to have. Limits do exist, but every limit that has confronted us, we have surpassed. That cycle of crisis and growth is the story of our history; indeed, it is the

essence of *The Big Ratchet*. Understanding it will reveal not just how we reached this point in our history, but how we might survive it.
