BEE IN BALANCE

A GUIDE TO HEALING THE WHOLE PERSON WITH HONEYBEES, ORIENTAL MEDICINE, AND COMMON SENSE

"BEE IN BALANCE: A Guide to Healing the Whole Person with Honeybees, Oriental Medicine, & Common Sense" by Amber Rose. This is an updated version of the 1994 edition, to be released on November 2, 2013 - many updates since last printing. Amber has a PhD.,L.Ac., LMSW and has been a healer all her life. After graduating with special honors from the Universities of Chicago and Iowa, she went on to study at the Traditional Acupuncture Institute in Columbia/Laurel, Maryland. Just as her psychotherapy experience alerted her to the value of acupuncture, Amber's acupuncture experience led her to Bee Venom Therapy (BVT) or Bee-Acupuncture. Amber believes that the bee sting was the first acupuncture needle. She feels that modern day acupuncture is an attempt to recreate the bee sting: the needle being the stinger and the use of moxibustion being the heat or burning sensation from the venom. In this unique book, Amber shares her discovery of the healing miracles available with honeybees and all their products. This approach to healing is unlike anything you've ever seen before. It is a synthesis of her experience with psychotherapy, acupuncture, spirituality, and the remarkable healing power of honeybees. This book is the Bible of Bee-Acupuncture. It has already become a classic! In the last few years there have been several double blind studies with injectable venom examining the healing components of bee venom for MS, HIV/AIDS, and cancer. There are even studies using "nanobees," tiny particles delivering cell-killing bee toxin to cancer cells, while leaving healthy cells intact. This is very exciting but not surprising to Dr. Rose. Amber, who uses live honeybees, has known for a long time that bee venom helps the body heal itself. The original version of "Bee In Balance" was written in 1994, less than a year after Amber began her healing journey with the bees. It has been out of print for many years. This brand new updated 4th edition to be released in November 2013 includes over 20 years of experiences and anecdotes, bee-acupuncture for humans and animals, as well her keynote speech in Vancouver, B.C., Canada on HIV/AIDS research that she conducted herself with live bee stings from 1994-97. If you know anyone who has an auto-immune disease, a chronic illness, or chronic pain, this book is a MUST READ!

DEFINING NOVEL CLINICAL SYNDROMES AND EMERGING PATHOGENS

Abstract: ABSTRACT of thesis entitled Defining Novel Clinical Syndromes and Emerging Pathogens submitted by Patrick Chiu-yat Woo for the degree of Doctor of Medicine at The University of Hong Kong in April, 2002. ii Accurate identification of microorganisms is crucial to both immediate management of patients as well as defining the epidemiology, clinical syndromes, treatment, and outcome of infectious diseases caused by the corresponding microbes in the long run. Traditionally, bacterial identification in clinical microbiological laboratories is achieved by isolation of the organism and studying their phenotypic characteristics by Gram staining, cultural requirements, and biochemical tests. However, this is associated with major drawbacks. First, bacteria with ambiguous biochemical profiles are occasionally observed. Second, when rare bacteria are encountered, their profiles are often not included in most commercially available identification systems. Additionally, their rarity would imply low positive predictive values even when they are "successfully identified." Hence the epidemiology, clinical syndromes, treatment, and outcome of infections caused by the corresponding bacteria are poorly defined. In the first part of this thesis, the application of 16S rRNA gene sequencing, the current gold standard of bacterial identification, to identify clinical bacterial isolates with ambiguous biochemical profiles was described. It was demonstrated that this would have direct impact on patient management in terms of whether antibiotics should be given, which antibiotics to prescribe, and the duration of antibiotics treatment. Furthermore, identification of bacteria with ambiguous biochemical profiles using 16S rRNA gene sequencing has also led us to the discovery of a novel clinical syndrome, acupuncture mycobacteriosis. In this study, four patients with mycobacterial infections complicating acupuncture were encountered in a 2-year period. All had clinical and/or radiological lesions at acupuncture point- and meridian-specific locations. There was no other history of trauma, nor other clinical foci of infections, and the chest radiographs were normal. Histological studies of iii biopsy specimens of all four patients showed changes compatible with chronic inflammation, with granulomatous inflammation present in three and acid fast bacilli in two. Conventional biochemical tests and whole cell fatty acid analysis for identification were inconclusive for all four non-pigmented rapidly growing mycobacteria recovered from tissue biopsies. 16S rRNA gene sequencing showed that the strains from two patients were *Mycobacterium chelonae*, and those from the other two were *Mycobacterium nonchromogenicum*. All four strains showed prolonged survival in 75% alcohol as compared to other skin flora. Strict implementation of proper infection control guidelines for acupuncture is mandatory. In addition to direct impact on patient management, it was shown that accurate identification of bacteria by 16S rRNA gene sequencing has changed our understanding in infectious diseases caused by both previously known and novel bacterial species. Infections caused by rarely encountered bacterial species such as *Mycobacterium neoaurum*, *Microbacterium* species, *Haemophilus segnis*, *Arcobacter cryaerophilus*, and *Arcobacter butzleri* are poorly understood. SUPPORTIVE CARE IN RESPIRATORY DISEASE

Respiratory symptoms such as breathlessness and cough are common in patients with advancing and incurable disease. For example, cancer, chronic cardiac and pulmonary disease, progressive neuromuscular disorders and degenerative disorders all give rise to varying degrees of respiratory distress which adversely affects the patient's quality of life. In recent years, there has been significant growth into the palliation of respiratory symptoms leading to practical ways of giving relief in hospices, hospitals and at home. The book includes non-malignant respiratory diseases such as tuberculosis in AIDS patients; ventilator-dependent patients and cystic fibrosis and focuses on aetiology and diagnosis and management, emphasizing symptoms, quality of life and psychosocial support. The underlying theme of the book is the application of modern research-based knowledge, in a humane way, for patients with advancing disease. Aimed primarily at specialists in palliative care, oncology and respiratory physicians; doctors, nurses, physiotherapists and pharmacists will also be interested. The book will appeal to those working in 'acute' specialties such as cardiology or pulmonary medicine, whose patients are not usually considered for palliative care, but in whom relief of distressing respiratory problems could improve the quality of life.

THE HISTORY OF SCIENCE AND TECHNOLOGY IN THE SPRING AND AUTUMN PERIOD AND THE WARRING STATES PERIOD

DeepLogic The book is the volume of "The History of Science and Technology in the Spring and Autumn Period and the Warring States Period" among a series of books of "Deep into China Histories". The earliest known written records of the history of China date from as early as 1250 BC, from the Shang dynasty (c. 1600-1046 BC) and the Bamboo Annals (296 BC) describe a Xia dynasty (c. 2070-1600 BC) before the Shang, but no writing is known from the period The Shang ruled in the Yellow River valley, which is commonly held to be the cradle of Chinese civilization. However, Neolithic civilizations originated at various cultural centers along both the Yellow River and Yangtze River. These Yellow River and Yangtze civilizations arose millennia before the Shang. With thousands of years of continuous history, China is one of the world's oldest civilizations, and is regarded as one of the cradles of civilization. The Zhou dynasty (1046-256 BC) supplanted the Shang and introduced the concept of the Mandate of Heaven to justify their rule. The central Zhou government began to weaken due to external and internal pressures in the 8th century BC, and the country eventually splintered into smaller states during the Spring and Autumn period. These states became independent and warred with one another in the following Warring States period. Much of traditional Chinese culture, literature and philosophy first developed during those troubled times. In 221 BC Qin Shi Huang conquered the various warring states and created for himself the title of Huangdi or "emperor" of the Qin, marking the beginning of imperial China. However, the oppressive government fell soon after his death, and was supplanted by the longer-lived Han dynasty (206 BC - 220 AD). Successive dynasties developed bureaucratic systems that enabled the emperor to control vast territories directly. In the 21 centuries from 206 BC until AD 1912, routine administrative tasks were handled by a special elite of scholar-officials. Young men, well-versed in calligraphy, history, literature, and philosophy, were carefully selected through difficult government examinations. China's last dynasty was the Qing (1644-1912), which was replaced by the Republic of China in 1912, and in the mainland by the People's Republic of China in 1949. Chinese history has alternated between periods of political unity and peace, and periods of war and failed statehood - the most recent being the Chinese Civil War

(1927-1949). China was occasionally dominated by steppe peoples, most of whom were eventually assimilated into the Han Chinese culture and population. Between eras of multiple kingdoms and warlordism, Chinese dynasties have ruled parts or all of China; in some eras control stretched as far as Xinjiang and Tibet, as at present. Traditional culture, and influences from other parts of Asia and the Western world (carried by waves of immigration, cultural assimilation, expansion, and foreign contact), form the basis of the modern culture of China.
