The Psychosocial Implications of Disney Movies

MDPI In this volume of 15 articles, contributors from a wide range of disciplines present their analyses of Disney movies and Disney music, which are mainstays of popular culture. The power of the Disney brand has heightened the need for academics to question whether Disney's films and music function as a tool of the Western elite that shapes the views of those less empowered. Given its global reach, how the Walt Disney Company handles the role of race, gender, and sexuality in social structural inequality merits serious reflection according to a number of the articles in the volume. On the other hand, other authors argue that Disney productions can help individuals cope with difficult situations or embrace progressive thinking. The different approaches to the assessment of Disney films as cultural artifacts also vary according to the theoretical perspectives guiding the interpretation of both overt and latent symbolic meaning in the movies. The authors of the 15 articles encourage readers to engage with the material, showcasing a variety of views about the good, the bad, and the best way forward.

The Invincible Iron Man

Extremis

Marvel Enterprises It's the beginning of a new era for Iron Man as renowned scribe Warren Ellis joins forces with digital painter Adi Granov to redefine the Armored Avenger's world for the 21st century - a landscape of terrifying new technologies that threaten to overwhelm fragile mankind! What is Extremis, who has unleashed it, and what does its emergence portend for the world? Collects Iron Man #1-6.

The Handbook of Medical Image Perception and Techniques

Cambridge University Press A state-of-the-art review of key topics in medical image perception science and practice, including associated techniques, illustrations and examples. This second edition contains extensive updates and substantial new content. Written by key figures in the field, it covers a wide range of topics including signal detection, image interpretation and advanced image analysis (e.g. deep learning) techniques for interpretive and computational perception. It provides an overview of the key techniques of medical image perception and observer performance research, and includes examples and applications across clinical disciplines including radiology, pathology and oncology. A final chapter discusses the future prospects of medical image perception and assesses upcoming challenges and possibilities, enabling readers to identify new areas for research. Written for both newcomers to the field and experienced researchers and clinicians, this book provides a comprehensive reference for those interested in medical image perception as means to advance knowledge and improve human health.

The Cambridge Handbook of Compliance

Cambridge University Press Compliance has become key to our contemporary markets, societies, and modes of governance across a variety of public and private domains. While this has stimulated a rich body of empirical and practical expertise on compliance, thus far, there has been no comprehensive understanding of what compliance is or how it influences various fields and sectors. The academic knowledge of compliance has remained siloed along different disciplinary domains, regulatory and legal spheres, and mechanisms and interventions. This handbook bridges these divides to provide the first one-stop overview of what compliance is, how we can best study it, and the core mechanisms that shape it. Written by leading experts, chapters offer perspectives from across law, regulatory

studies, management science, criminology, economics, sociology, and psychology. This volume is the definitive and comprehensive account of compliance.

A Hybrid Publishing Toolkit for the Arts

This Toolkit is meant for everyone working in art and design publishing. No specific expertise of digital technology, or indeed traditional publishing technology, is required. The Toolkit provides hands-on practical advice and tools, focusing on working solutions for low-budget, small-edition publishing. Everything in the Hybrid Publishing Toolkit is based on real-world projects with art and design publishers. Editorial scenarios include art and design catalogues and periodicals, research publications, and artists'/designer's books.

Training and Coaching the Paralympic Athlete

John Wiley & Sons Part of the esteemed IOC Handbook of Sports Medicine and Science series, this new volume on Training and Coaching the Paralympic Athlete will be athlete-centred with each chapter written for the practical use of medical doctors and allied health personnel. The chapters also consider the role of medical science in the athlete's sporting career and summarize current international scientific Paralympic literature. Provides a concise, authoritative overview of the science, medicine and psycho-social aspects of training and coaching disabled and Paralympic athletes Offers guidance on medical aspects unique to the training and coaching of Paralympic athletes Endorsed by both the International Olympic Committee (IOC) and the International Paralympic Committee (IPC) Written and edited by global thought leaders in sports medicine

Earth Observation Open Science and Innovation

Springer This book is published open access under a CC BY 4.0 license. Over the past decades, rapid developments in digital and sensing technologies, such as the Cloud, Web and Internet of Things, have dramatically changed the way we live and work. The digital transformation is revolutionizing our ability to monitor our planet and transforming the way we access, process and exploit Earth Observation data from satellites. This book reviews these megatrends and their implications for the Earth Observation community as well as the wider data economy. It provides insight into new paradigms of Open Science and Innovation applied to space data, which are characterized by openness, access to large volume of complex data, wide availability of new community tools, new techniques for big data analytics such as Artificial Intelligence, unprecedented level of computing power, and new types of collaboration among researchers, innovators, entrepreneurs and citizen scientists. In addition, this book aims to provide readers with some reflections on the future of Earth Observation, highlighting through a series of use cases not just the new opportunities created by the New Space revolution, but also the new challenges that must be addressed in order to make the most of the large volume of complex and diverse data delivered by the new generation of satellites.

Virtual Heritage

A Guide

This book provides an accessible but concise edited coverage of the main topics, tools and issues in virtual heritage.

Idea Man

A Memoir by the Co-founder of Microsoft

Penguin UK By his early thirties, Paul Allen was a world-famous billionaire-and that was just the beginning. In 2007 and 2008, Time named Paul Allen, the cofounder of Microsoft, one of the hundred most influential people in the world. Since he made his fortune, his impact has been felt in science, technology, business, medicine, sports, music, and philanthropy. His passion, curiosity, and intellectual rigor-combined with the resources to launch and support new initiatives-have literally changed the world. In 2009 Allen discovered that he had lymphoma, lending urgency to his

desire to share his story for the first time. In this long-awaited memoir, Allen explains how he has solved problems, what he's learned from his many endeavors-both the triumphs and the failures-and his compelling vision for the future. He reflects candidly on an extraordinary life. The book also features previously untold stories about everything from the true origins of Microsoft to Allen's role in the dawn of private space travel (with SpaceShipOne) and in discoveries at the frontiers of brain science. With honesty, humor, and insight, Allen tells the story of a life of ideas made real.

Mobile Computing, Applications, and Services

5th International Conference, MobiCase 2013, Paris, France, November 7-8, 2013, Revised Selected Papers

Springer This book constitutes the thoroughly refereed post-conference proceedings of the 5th International Conference on Mobile Computing, Applications, and Services (MobiCASE 2013) held in Paris, France, in November 2013. The 13 full, 5 short and 9 poster papers were carefully reviewed and selected from 64 submissions, and are presented together with 3 papers from the Workshop on Near Field Communication for Mobile Applications (NFS). The conference papers are covering mobile applications development, mobile social networking, novel user experience and interfaces, mobile services and platforms such as Android, iOS, BlackBerry OS, Windows phone, Bada, mobile software engineering and mobile Web, mobile payments and M2M infrastructure, mobile services such as novel hardware add-ons, energy aware services or tools, NFC-based services, authentication services.

Convergence Culture

Where Old and New Media Collide

NYU Press "What the future fortunes of [Gramsci's] writings will be, we cannot know. However, his permanence is already sufficiently sure, and justifies the historical study of his international reception. The present collection of studies is an indispensable foundation for this." —Eric Hobsbawm, from the preface Antonio Gramsci is a giant of Marxian thought and one of the world's greatest cultural critics. Antonio A. Santucci is perhaps the world's preeminent Gramsci scholar. Monthly Review Press is proud to publish, for the first time in English, Santucci's masterful intellectual biography of the great Sardinian scholar and revolutionary. Gramscian terms such as "civil society" and "hegemony" are much used in everyday political discourse. Santucci warns us, however, that these words have been appropriated by both radicals and conservatives for contemporary and often self-serving ends that often have nothing to do with Gramsci's purposes in developing them. Rather what we must do, and what Santucci illustrates time and again in his dissection of Gramsci's writings, is absorb Gramsci's methods. These can be summed up as the suspicion of "grand explanatory schemes," the unity of theory and practice, and a focus on the details of everyday life. With respect to the last of these, Joseph Buttigieg says in his Nota: "Gramsci did not set out to explain historical reality armed with some full-fledged concept, such as hegemony; rather, he examined the minutiae of concrete social, economic, cultural, and political relations as they are lived in by individuals in their specific historical circumstances and, gradually, he acquired an increasingly complex understanding of how hegemony operates in many diverse ways and under many aspects within the capillaries of society." The rigor of Santucci's examination of Gramsci's life and work matches that of the seminal thought of the master himself. Readers will be enlightened and inspired by every page.

Alternative Assets and Cryptocurrencies

MDPI Alternative assets such as fine art, wine, or diamonds have become popular investment vehicles in the aftermath of the global financial crisis. Correlation with classical financial markets is typically low, such that diversification benefits arise for portfolio allocation and risk management. Cryptocurrencies share many alternative asset features, but are hampered by high volatility, sluggish commercial acceptance, and regulatory uncertainties. This collection of papers addresses alternative assets and cryptocurrencies from economic, financial, statistical, and technical points of view. It gives an overview of their current state and explores their properties and prospects using innovative approaches and methodologies.

Serious Games and Edutainment Applications

Volume II

Springer With the continued application of gaming for training and education, which has seen exponential growth over the past two decades, this book offers an insightful introduction to the current developments and applications of game technologies within educational settings, with cutting-edge academic research and industry insights, providing a greater understanding into current and future developments and advances within this field. Following on from the success of the first volume in 2011, researchers from around the world presents up-to-date research on a broad range

of new and emerging topics such as serious games and emotion, games for music education and games for medical training, to gamification, bespoke serious games, and adaptation of commercial off-the shelf games for education and narrative design, giving readers a thorough understanding of the advances and current issues facing developers and designers regarding games for training and education. This second volume of Serious Games and Edutainment Applications offers further insights for researchers, designers and educators who are interested in using serious games for training and educational purposes, and gives game developers with detailed information on current topics and developments within this growing area.

Entertainment Science

Data Analytics and Practical Theory for Movies, Games, Books, and Music

Springer The entertainment industry has long been dominated by legendary screenwriter William Goldman's "Nobody-Knows-Anything" mantra, which argues that success is the result of managerial intuition and instinct. This book builds the case that combining such intuition with data analytics and rigorous scholarly knowledge provides a source of sustainable competitive advantage – the same recipe for success that is behind the rise of firms such as Netflix and Spotify, but has also fueled Disney's recent success. Unlocking a large repertoire of scientific studies by business scholars and entertainment economists, the authors identify essential factors, mechanisms, and methods that help a new entertainment product succeed. The book thus offers a timely alternative to "Nobody-Knows" decision-making in the digital era: while coupling a good idea with smart data analytics and entertainment theory cannot guarantee a hit, it systematically and substantially increases the probability of success in the entertainment industry. Entertainment Science is poised to inspire fresh new thinking among managers, students of entertainment, and scholars alike. Thorsten Hennig-Thurau and Mark B. Houston – two of our finest scholars in the area of entertainment marketing – have produced a definitive research-based compendium that cuts across various branches of the arts to explain the phenomena that provide consumption experiences to capture the hearts and minds of audiences. Morris B. Holbrook, W. T. Dillard Professor Emeritus of Marketing, Columbia University Entertainment Science is a must-read for everyone working in the entertainment industry today, where the impact of digital and the use of big data can't be ignored anymore. Hennig-Thurau and Houston are the scientific frontrunners of knowledge that the industry urgently needs. Michael Kölmel, media entrepreneur and Honorary Professor of Media Economics at University of Leipzig Entertainment Science's winning combination of creativity, theory, and data analytics offers managers in the creative industries and beyond a novel, compelling, and comprehensive approach to support their decision-making. This ground-breaking book marks the dawn of a new Golden Age of fruitful conversation between entertainment scholars, managers, and artists. Allègre Hadida, Associate Professor in Strategy, University of Cambridge

The Second Machine Age: Work, Progress, and Prosperity in a Time of Brilliant Technologies

W. W. Norton & Company A pair of technology experts describe how humans will have to keep pace with machines in order to become prosperous in the future and identify strategies and policies for business and individuals to use to combine digital processing power with human ingenuity.

The Art of Spiritual Healing

The Art of Spiritual Healing is based on Joel Goldsmith's many years of experience in practicing spiritual healing. In a decided departure from other books on the subject, Goldsmith reveals the spiritual principles that are the foundation for spiritual healing. He alternates instruction with meditation to demonstrate his conviction that since physical health is a manifestation of consciousness, physical well-being is a natural result of attaining the consciousness of oneness with God. Complete in scope and non-denominational in approach, The Art of Spiritual Healing is a simple, straightforward explanation of what to many is a mysterious and complex subject. The book is presented in four parts: "The Principles," "The Role of Treatment," "The Practice," and "Without Words or Thoughts." Goldsmith believes that the world needs people who, through devotion to God, are so filled with the Spirit that they can be the instruments through which healings take place. He says, "There is not a person reading this book, who should not be ready to accept the responsibility of beginning to heal now. It is not your spirituality or mine that will heal anybody; it is not your understanding or mine that is going to heal. It is God's understanding to which we make ourselves receptive by becoming still." Together with The Art of Meditation, Living the Infinite Way, and Practicing the Presence, this is a foundational book of the Infinite Way message.

Lithium-Ion Batteries: Basics and Applications

Springer The handbook focuses on a complete outline of lithium-ion batteries. Just before starting with an exposition of the fundamentals of this system, the book gives a short explanation of the newest cell generation. The most

important elements are described as negative / positive electrode materials, electrolytes, seals and separators. The battery disconnect unit and the battery management system are important parts of modern lithium-ion batteries. An economical, faultless and efficient battery production is a must today and is represented with one chapter in the handbook. Cross-cutting issues like electrical, chemical, functional safety are further topics. Last but not least standards and transportation themes are the final chapters of the handbook. The different topics of the handbook provide a good knowledge base not only for those working daily on electrochemical energy storage, but also to scientists, engineers and students concerned in modern battery systems.

Game Research Methods: An Overview

Lulu.com "Games are increasingly becoming the focus for research due to their cultural and economic impact on modern society. However, there are many different types of approaches and methods than can be applied to understanding games or those that play games. This book provides an introduction to various game research methods that are useful to students in all levels of higher education covering both quantitative, qualitative and mixed methods. In addition, approaches using game development for research is described. Each method is described in its own chapter by a researcher with practical experience of applying the method to topic of games. Through this, the book provides an overview of research methods that enable us to better our understanding on games."--Provided by publisher.

High Performance Silicon Imaging

Fundamentals and Applications of CMOS and CCD sensors

Elsevier High Performance Silicon Imaging covers the fundamentals of silicon image sensors, with a focus on existing performance issues and potential solutions. The book considers several applications for the technology as well. Silicon imaging is a fast growing area of the semiconductor industry. Its use in cell phone cameras is already well established, and emerging applications include web, security, automotive, and digital cinema cameras. Part one begins with a review of the fundamental principles of photosensing and the operational principles of silicon image sensors. It then focuses in on charged coupled device (CCD) image sensors and complementary metal oxide semiconductor (CMOS) image sensors. The performance issues considered include image quality, sensitivity, data transfer rate, system level integration, rate of power consumption, and the potential for 3D imaging. Part two then discusses how CMOS technology can be used in a range of areas, including in mobile devices, image sensors for automotive applications, sensors for several forms of scientific imaging, and sensors for medical applications. High Performance Silicon Imaging is an excellent resource for both academics and engineers working in the optics, photonics, semiconductor, and electronics industries. Covers the fundamentals of silicon-based image sensors and technical advances, focusing on performance issues Looks at image sensors in applications such as mobile phones, scientific imaging, TV broadcasting, automotive, and biomedical applications

University Interviews Guide

Lithium-ion Batteries

A Machine-generated Summary of Current Research

"This is the first machine-generated scientific book in chemistry published by Springer Nature. Serving as an innovative prototype defining the current status of the technology, it also provides an overview about the latest trends of lithium-ion batteries research. This book explores future ways of informing researchers and professionals. State-of-the-art computer algorithms were applied to: select relevant sources from Springer Nature publications, arrange these in a topical order, and provide succinct summaries of these articles. The result is a cross-corpora auto-summarization of current texts, organized by means of a similarity-based clustering routine in coherent chapters and sections. This book summarizes more than 150 research articles published from 2016 to 2018 and provides an informative and concise overview of recent research into anode and cathode materials as well as further aspects such as separators, polymer electrolytes, thermal behavior and modelling. With this prototype, Springer Nature has begun an innovative journey to explore the field of machine-generated content and to find answers to the manifold questions on this fascinating topic. Therefore it was intentionally decided not to manually polish or copy-edit any of the texts so as to highlight the current status and remaining boundaries of machine-generated content. Our goal is to initiate a broad discussion, together with the research community and domain experts, about the future opportunities, challenges and limitations of this technology."--Publisher's website.

Conscious Union With God

Understanding the Truth

Simon and Schuster If you think that there is some new truth to be learned humanly, you will be disappointed because there is not a single new truth in the entire world. The truth revealed in this book is not my truth or my message, but the word of God which has been imparting itself to universal consciousness throughout all time. That word of God is already embodied in your consciousness, and this truth, which is already your consciousness, is now being unveiled to you within you. Unless God is my consciousness, there will be no truth expressing itself through, or as, me; and, moreover, unless God is your consciousness, you will not understand the truth that is being presented. But, since God is universal consciousness and since God is my consciousness, truth is expressing itself as this book.

Business Ethics

iOS Hacker's Handbook

John Wiley & Sons Discover all the security risks and exploits that can threateniOS-based mobile devices iOS is Apple's mobile operating system for the iPhone and iPad.With the introduction of iOS5, many security issues have come tolight. This book explains and discusses them all. The award-winningauthor team, experts in Mac and iOS security, examines thevulnerabilities and the internals of iOS to show how attacks can bemitigated. The book explains how the operating system works, itsoverall security architecture, and the security risks associatedwith it, as well as exploits, rootkits, and other payloadsdeveloped for it. Covers iOS security architecture, vulnerability hunting,exploit writing, and how iOS jailbreaks work Explores iOS enterprise and encryption, code signing and memoryprotection, sandboxing, iPhone fuzzing, exploitation, ROP payloads,and baseband attacks Also examines kernel debugging and exploitation Companion website includes source code and tools to facilitateyour efforts iOS Hacker's Handbook arms you with the tools needed toidentify, understand, and foil iOS attacks.

Communication in Pharmacy Practice

MDPI This book is a printed edition of the Special Issue "Communication in Pharmacy Practice" that was published in Pharmacy

Immigrant Generations, Media Representations, and Audiences

Springer Nature This anthology examines how immigrants and their US-born children use media to negotiate their American identity and how audiences engage with mediated narratives about the immigrant experience (cultural adjustments, language use, and the like). Where this work diverges from other collections and monographs is the area is its intentional focus on how both first- and second-generation Americans' complex identities and hybrid cultures interact with mediated narratives in general, alongside the extent to which these narratives reflect their experience. In a three-part structure, the collection examines representations, "zooms in" to explore the reception of these narratives through autoethnographic essays, and concludes in a section of analysis and critique of specific media.

Semiconductor Packaging

Materials Interaction and Reliability

CRC Press In semiconductor manufacturing, understanding how various materials behave and interact is critical to making a reliable and robust semiconductor package. Semiconductor Packaging: Materials Interaction and Reliability provides a fundamental understanding of the underlying physical properties of the materials used in a semiconductor package. By tying together the disparate elements essential to a semiconductor package, the authors show how all the parts fit and work together to provide durable protection for the integrated circuit chip within as well as a means for the chip to communicate with the outside world. The text also covers packaging materials for MEMS, solar technology, and LEDs and explores future trends in semiconductor packages.

Paratextualizing Games

Investigations on the Paraphernalia and Peripheries of Play

transcript Verlag Gaming no longer only takes place as a ›closed interactive experience‹ in front of TV screens, but also as broadcast on streaming platforms or as cultural events in exhibition centers and e-sport arenas. The popularization of new technologies, forms of expression, and online services has had a considerable influence on the academic and journalistic discourse about games. This anthology examines which paratexts gaming cultures have produced - i.e., in which forms and formats and through which channels we talk (and write) about games - as well as the way in which paratexts influence the development of games. How is knowledge about games generated and shaped today and how do boundaries between (popular) criticism, journalism, and scholarship have started to blur? In short: How does the paratext change the text?

The Readies

In 1930, Bob Brown predicted that the printed book was bound for obsolescence. The time has come, he insisted, to rid the reader of the cumbersome book. He invented a machine that would allow one to read books and any text extremely fast and in a hyper abbreviated form. He called these abbreviated texts, with em dashes replacing words: readies. He envisioned sending the condensed texts through wireless networks. The Readies, describes these eponymously named abbreviated texts and his plans for a reading machine, but since he printed only 150 copies, the volume is practically unknown outside of a small circle of scholars. With this new edition, Craig Saper hopes to introduce Bob Brown's Roving Eye Press books to a new generation of readers.

Music Business Handbook and Career Guide

SAGE Publications This powerhouse best-selling text remains the most comprehensive, up-to-date guide to the music industry. The breadth of coverage that Music Business Handbook and Career Guide, Eleventh Edition offers surpasses any other resource available. Readers new to the music business and seasoned professionals alike will find David Baskerville and Tim Baskerville's handbook an indispensable resource, regardless of their specialty within the music field. This text is ideal for introductory courses such as Introduction to the Music Business, Music and Media, and Music Business Foundations as well as more specialized courses such as the record industry, music careers, artist management, and more. The fully updated Eleventh Edition includes coverage of key topics such as copyright, licensing, songwriting, concert venues, and the entrepreneurial musician. Uniquely, it provides career-planning insights on dozens of job categories in the diverse music industry.

Information and Communication Technologies in Tourism 2021

Proceedings of the ENTER 2021 eTourism Conference, January 19–22, 2021

Springer This open access book is the proceedings of the International Federation for IT and Travel & Tourism (IFITT)'s 28th Annual International eTourism Conference, which assembles the latest research presented at the ENTER21@yourplace virtual conference January 19-22, 2021. This book advances the current knowledge base of information and communication technologies and tourism in the areas of social media and sharing economy, technology including AI-driven technologies, research related to destination management and innovations, COVID-19 repercussions, and others. Readers will find a wealth of state-of-the-art insights, ideas, and case studies on how information and communication technologies can be applied in travel and tourism as we encounter new opportunities and challenges in an unpredictable world.

The Great University Gamble

Money, Markets and the Future of Higher Education

Pluto Press In 2010 the UK government proposed huge cuts and market-driven reforms for Universities. The proposals provoked widespread opposition in the form of street protests, occupations, and online campaigns. As the dust settles, Andrew McGettigan surveys the emerging brave new world of Higher Education. Displaying a stunning grasp of the policy details, he looks at the long term impact of the changes, which have been obscured by the focus on tuition fee increases. What will be the role of universities within society? How will they be funded? What kind of experiences will they offer students? Written in a clear and engaging style,The Great University Gamble outlines the architecture of the

new policy regime, which many find difficult to grasp. It is an urgent warning that our Universities are being transformed from institutions of real learning to profit-driven degree factories.

The Master Speaks

Martino Fine Books 2010 Reprint of 1962 Edition.Joel Solomon Goldsmith (March 10, 1892-June 17, 1964) was an author, teacher, spiritual healer, mystic, and founder of the Infinite Way movement. In this book Goldsmith makes a distinction between psychological healing and spiritual healing. Psychological healing is primarily an activity of the human mind and the intellect. Spiritual healing is an activity of the soul faculties; it is always performed without mental activity, without the necessity of the physical presence of the patient, and often without his cooperation beyond giving his consent. The book is devoted to explaining the art of spiritual healing.

Health Communication

Jones & Bartlett Learning Health Communication: Strategies and Skills for a New Era provides a practical process model for developing a health communication intervention. The book also explores exposure to media and how it shapes our conceptions of health and illness. Using a life stages and environments approach, the book touches on the patient role and how we 'hear' information from health care providers as well as guidance on how to be a thoughtful consumer of health information.

Human Computer Confluence

Transforming Human Experience Through Symbiotic Technologies

de Gruyter Open Human computer confluence is a research area aimed at developing an effective, even transparent, bidirectional communication between humans and computers, which has the potential to enable new forms of sensing, perception, interaction, and understanding. This book provides a groundbreaking collection of chapters exploring the science, technology and applications of HCC, bringing together experts in neuroscience, psychology and computer science.

Man Was Not Born to Cry

Acropolis Books Incorporated Man's eternal quest for self-knowledge and self-fulfillment demands a continuing expansion of consciousness. Consciousness, the secret of life, determines man's experiences. Discovery of this secret is the primary purpose of man's presence in the world.

The World Is New

The World Is New is a superb exposition of Joel Goldsmith's path to practical spirituality called The Infinite Way. The major theme of The World Is New is that recognizing our spiritual identity as the Christ, or God appearing as individual being, makes for newness of life. "The world is new to every soul when Christ has entered into it," says Goldsmith, quoting from the inscription in the Stanford Memorial Church that inspired the title for the book. To embody the principles set forth so clearly in this book is to experience that newness of life that makes the whole world new and unexpectedly wondrous. "How many times we have read in the New Testament about the Father within! How many times we have read what Paul said: 'I live; yet not I, but Christ liveth in me, '" says Goldsmith. "But how seldom have we sat down with ourselves and felt that we must get acquainted with this Father within and find out what Paul meant. Few ever really investigate and find out if what Jesus said is true." The World Is New helps the reader with that investigation, setting forth the breadth and depth of Goldsmith's teaching with unequalled clarity, and teaching the spiritual practices that will bring the seeker to the spiritual freedom that is attained when we touch the Christ of our own being and actually feel the divine Presence within us. "There are those who have ears but do not hear and those who have eyes but do not see," Goldsmith says. "We have eyes, certainly. But do we see an infinite supply of good? We cannot see it with our human eyes. We see it only with that inner eye, when our attention is centered on receptivity to God. In that inner vision, we can behold everything present now. It is all here. We do not need to have a single new thing added to our experience to make it complete. We have only to open our spiritual eyes to see the fullness and completeness of God's universe, which is already here and which is already now - and then the world is new."
