SUPERVISION IN CLINICAL PRACTICE

A PRACTITIONER'S GUIDE

This fully updated edition of Supervision in Clinical Practice: A Practitioner's Guide is packed with practical examples from personal and professional experience. Since the publication of the first two editions, health and social care organisations have become increasingly risk averse, resources more strained, and moves have been made towards stifling levels of clinical governance. In this edition Joyce Scaife counters the idea of supervision as a constraint and challenges some of the thinking associated with 'evidence-based' practice when this focuses on what can be easily measured rather than what matters. Joyce Scaife explores frequently encountered dilemmas including: How can supervisors facilitate learning? What are the ethical bases of supervision? What helps to create and maintain an effective working alliance? How can supervisors balance management and supervision roles? How can supervisors work equitably in an increasingly diverse and pluralistic world? Supervision in Clinical Practice remains an indispensable text for supervisors and supervisees who practice clinically in a range of professions, including applied psychology, counselling, psychotherapy, psychiatry, nursing, and social work. te and maintain an effective working alliance? PRACTISING CLINICAL SUPERVISION

A REFLECTIVE APPROACH

Bailliere Tindall Clinical supervision is something which affects all practising nurses. It forms an integral part of the drive towards quality and clinical governance. It is often regarded as something new, yet as this book shows, it is often about recognising activities that already happen in practice. The aim of this book is to provide a user-friendly, but thought-provoking, practical guide to clinical supervision. It assumes no previous knowledge and can be used by any practitioner who needs to engage in the process, or to implement it in any clinical setting. It does not insist that you adopt any particular approach, but rather concentrates on demonstrating ways in which clinical supervision can

enhance practice through a process of reflection and regular clinical feedback, learning and support. It is based on the author's extensive experience of helping NHS Trusts and other healthcare organisations to implement clinical supervision and prepare both supervisors and supervisees. Many of the case studies and examples used are drawn from this real-life experience in practice.
