The Fourfold Gospel, Volume 2 A Formational Commentary on Matthew, Mark, Luke, and John: From Summons to Signs [Wipf and Stock Publishers](#) **In the spirit of Ludolph of Saxony (c. 1295-1378) and Ignatius of Loyola (1491-1556), The Fourfold Gospel invites the reader into the mystery of God's redemption in Jesus Christ. All the parallel passages in the Gospels are glossed together, along with the unique material, using a medieval interpretive approach called the Quadriga or the acronym PaRDeS in Hebrew. Meditating on the literal, canonical, moral, and theological senses of Scripture offers a scaffolding for the spiritual formation of the reader. This volume focuses on the summoning and purgative stage of discipleship—the Sermon on the Mount—as well as participating in Christ's healing of creation.**

consciousness. **Designing Beauty: The Art of Cellular Automata** [Springer](#) This fascinating, colourful book offers in-depth insights and first-hand working experiences in the production of art works, using simple computational models with rich morphological behaviour, at the edge of mathematics, computer science, physics and biology. It organically combines ground breaking scientific discoveries in the theory of computation and complex systems with artistic representations of the research results. In this appealing book mathematicians, computer scientists, physicists, and engineers brought together marvelous and esoteric patterns generated by cellular automata, which are arrays of simple machines with complex behavior. Configurations produced by cellular automata uncover mechanics of dynamic patterns formation, their propagation and interaction in natural systems: heart pacemaker, bacterial membrane proteins, chemical reactors, water permeation in soil, compressed gas, cell division, population dynamics, reaction-diffusion media and self-organisation. The book inspires artists to take on cellular automata as a tool of creativity and it persuades scientists to convert their research results into the works of art. The book is lavishly illustrated with visually attractive examples, presented in a lively and easily accessible manner. **Artificial Life Models in Software** [Springer Science & Business Media](#) An informal introduction and guidance to modern software tools for modeling and simulation of life-like phenomena, this book offers detailed reviews of contemporary software for artificial life for both professionals and amateurs. **The Museum of Foreign Literature, Science and Art A Year in Review for the Pacific Northwest Research Station** **Popular Science** Popular Science gives our readers the information and tools to improve their technology and their world. Caught in the middle is John Spencer, a bumbling but loveable English teacher struggling through the final weeks of his spring semester. But keeping focused on a Jane Austen seminar proves problematic when a His crush on the sexy school librarian and a pending promotion threaten to divert his attention and are threatening to sink him in a sea of academic intrigue. Things become even more complicated when the college counselor asks John to lie (or at least exaggerate) in a recommendation letter for the very student who he's just discovered is a plagiarizer! And things are only about to get worse for John, who discovers that no price is too high to achieve a coveted admission to Harvard, Yale, or Princeton-even if that includes his own disgrace. Witty and rollicking, Academy X is a priceless peek into New York City's top private schools-indeed into elite schools all over the country where parents risk all for their child's academic. **The Museum of Foreign Literature and Science Science Club Rules A Novel** [St. Martin's Press](#) In Eden's Glen, an iconic world of privilege and ease, the comfortable rituals of wealth and leisure have created an enclave almost untouched by time. But position is not easy to attain, or to keep. And quiet desperation has suddenly found its way into lives whose paths were always smooth before. Earth Science Scientific American The City Natural Garden and Forest Magazine and the Rise of American Environmentalism [University of Pittsburgh Pre](#) The weekly magazine Garden and Forest existed for only nine years (1888-1897). Yet, in that brief span, it brought to light many of the issues that would influence the future of American environmentalism. In The City Natural, Shen Hou presents the first "biography" of this important but largely overlooked vehicle for individuals with the common goal of preserving nature in American civilization. As Hou's study reveals, Garden and Forest was instrumental in redefining the fields of botany and horticulture, while also helping to shape the fledgling professions of landscape architecture and forestry. The publication actively called for reform in government policy, urban design, and future planning for the preservation and inclusion of nature in cities. It also attempted to shape public opinion on these issues through a democratic ideal that every citizen had the right (and need) to access nature. These notions would anticipate the conservation and "city beautiful" movements that followed in the early twentieth century. Hou explains the social and environmental conditions that led to the rise of reform efforts, organizations, and publications such as Garden and Forest. She reveals the intellectual core and vision of the magazine as a proponent of the city natural movement that sought to relate nature and civilization through the arts and sciences. Garden and Forest was a staunch advocate of urban living made better through careful planning and design. As Hou shows, the publication also promoted forest management and preservation, not only as a natural resource but as an economic one. She also profiles the editors and contributors who set the magazine's tone and follows their efforts to expand America's environmental expertise. Through the pages of Garden and Forest, the early period of environmentalism was especially fruitful and optimistic; many individuals joined forces for the benefit of humankind and helped lay the foundation for a coherent national movement. Shen Hou's study gives Garden and Forest its due and adds an important new chapter to the early history of American environmentalism. Global Dynamics Of Cellular Automata An Atlas Of Basin Of Attraction Fields Of One-dimensional Cellular Automata [Westview Press](#) The book introduces a powerful new global perspective for the study of discrete dynamical systems. After first looking at the unique trajectory of a system's future, an algorithm is also presented that directly computes the multiple merging trajectories that may have constituted the system's past. A given set of cellular parameters will, in a sense, crystallize state space into a set of basins of attraction that will typically have the topology of branching trees rooted on attractor cycles. The book makes accessible the explicit portraits of these mathematical objects through computer-generated graphics. (Book/disk package disk requires an 80286, or higher, IBM PC or compatible with 640K of memory, VGA graphics, and DOS 2.0 or higher.
