Culture, Aesthetics and Affect in Ubiquitous Media

The Prosaic Image

Routledge **This book argues that ubiquitous media and user-created content establish a new perception of the world that can be called 'particulate vision', involving a different relation to reality that better represents the atomization of contemporary experience especially apparent in social media. Drawing on extensive original research including detailed ethnographic investigation of camera phone practices in Hong Kong, as well as visual analysis identifying the patterns, regularities and genres of such work, it shows how new distributed forms of creativity and subjectivity now work to shift our perceptions of the everyday. The book analyses the specific features of these new developments – the components of what can be called a 'general aesthesia' – and it focuses on the originality and innovation of amateur practices, developing a model for making sense of the huge proliferation of images in contemporary culture, discovering rhythms and tempo in this work and showing why it matters.**

London Wallpapers

Their Manufacture and Use, 1690-1840

London Wallpapers, first published in 1992, has long been out of print. In this new, revised edition there is a substantially enlarged list of wallpaper manufacturers in all their various guises: stationers, paper stainers, paper hanging manufacturers, paper hangers, even "Thomas William Paul, fancy cabinet maker & paper stainer." The list has doubled in size to nearly 800 names covering the longer period 1690 to 1840. Also included for the first time is a particularly fine water-colour of a hand-block printer at work c.1880, a time when the process had achieved its apogee but had not yet been totally replaced by mechanical printing methods. The book describes the method in which rag-based paper was made for wallpaper use, the manner in which wallpaper was printed using hand-carved wooden blocks - with a detailed description of printing flock papers, a fashion for which has recently re-emerged. There is a brief description of the taxes on wallpaper introduced in 1712 and which still govern the normal length of paper today. The various ways that paper were designed and the methods by which wallpaper was hung are also covered. Finally in the text there is an examination of how the London wallpaper trade worked, looking briefly at one of the great eighteenth century paper strainers, Thomas Bromwich, "at the Sign of the Golden Lyon on Ludgate Hill, near St Paul's Churchyard". The book has 16 black and white pictures, mostly of eighteenth century trade cards used by wallpaper merchants as advertisements and for writing out receipts. Most notably the book has 40 full colour plates of London made wallpapers with descriptions of each paper and the house from which it came.

Computing in the Web Age: A Web-Interactive Introduction

Springer Science & Business Media **This book reflects thirty years of experience in the applications of computer technology to literary research and instruction and in consulting work in office automation and system integration. In that time I have again and again found myself in the position of having to introduce students, both undergraduate and graduate, colleagues and clients to the fundamentals of computer hardware and software. Over the years, as computers became both central and commonplace in professional life, I have been aware of changing attitudes toward this technology. From attitudes that ranged from the disdain of platonic dialecticians for mere technology to intimidation bordering at times almost on terror, people have moved to incorporate this new technology into their frame of reference (humani nil a me alienum). The development of the microprocessor and its subsequent use for word processing marked one important watershed. The widespread use of word processors made it more likely than not that people would own their own computers, at least at work, and use them as part of their work-a-day activities. But while word processing provided some increased familiarity with computers, it did not lead most indivi- als much beyond a knowledge of the usual incantations needed to control the MultiMate or Nota Bene or Word Perfect golam and, as a result of unhappy experience, a begrudging acceptance of the need to make back up copies of important files.**

Health Care Computing

A Survival guide for PC users

Springer **Most health professionals have to use computers - at least some of the time. Frequently, those computers are personal computers -the generic name for the ones that are variously known as 'IBM compatible' or 'IBM clones' or just PCs. This separates them out from certain other makes such as the Apple Macintosh, the Amstrad dedicated word processor, the Atari, Amiga and a number of others. This book is about PCs. When you need information about your computer when you are busy, you don't want to have to wade through piles of manuals to find what you need. You often need a fairly straightforward piece of information - now. Computers can be infuriating. When they are up and running properly, they can save time and help you to be more productive. When something goes wrong, they can be extremely frustrating. Once you have called in someone else to fix your problem, it is often apparent that the answer to your problem was only a few keystrokes away. This book aims at supplying you with small chunks of information that can aid your productivity, get you out of awkward corners and help you to become more at home with your Pc. It has been my experience - as a health care lecturer and as a regular com puter user - that you need to develop a certain baseline of confidence in working with them.**

Television Goes Digital

Springer Science & Business Media Television has become a ubiquitous part of our lives, and yet its impact continues to evolve at an extraordinary pace. The evolution of television from analog to digital technology has been underway for more than half a century. Today's digital technology is enabling a myriad of new entertainment possibilities. This volume showcases insights from industry insiders and researchers from a variety of disciplines.
